

# Ultra-Low-Power Series Voltage Reference

## General Description

The MAX6129 micropower, low-dropout bandgap voltage reference combines ultra-low supply current and low drift in a miniature 5-pin SOT23 surface-mount package that uses 70% less board space than comparable devices in an SO package. This series-mode voltage reference sources up to 4mA and sinks up to 1mA of load current. A wide 2.5V to 12.6V supply range, ultra-low 5.25 $\mu$ A (max) supply current, and a low 200mV dropout voltage make these devices ideal for battery-operated systems.

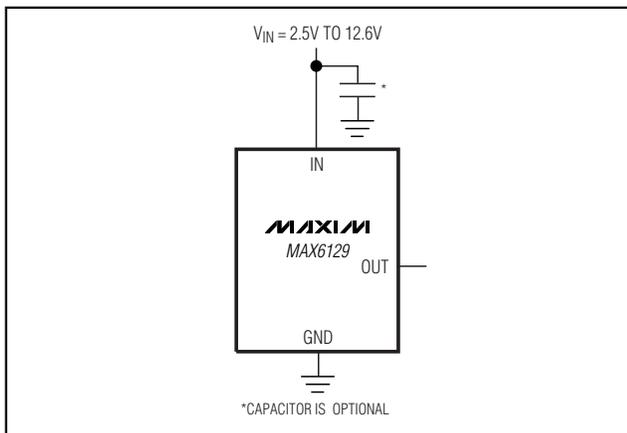

An initial accuracy of 0.4% and a 40ppm/ $^{\circ}$ C (max) temperature coefficient make the MAX6129 suitable for precision applications. Additionally, an internal compensation capacitor eliminates the need for an external compensation capacitor and ensures stability with load capacitances up to 10 $\mu$ F.

The MAX6129 provides six output voltages of 2.048V, 2.5V, 3V, 3.3V, 4.096V, and 5V. The MAX6129 is available in a 5-pin SOT23 package and is specified over the extended temperature range (-40 $^{\circ}$ C to +85 $^{\circ}$ C).

## Applications

Battery-Powered Systems  
Hand-Held Instruments  
Precision Power Supplies  
A/D and D/A Converters

## Typical Operating Circuit

## Features

- ◆ Ultra-Low 5.25 $\mu$ A (max) Supply Current
- ◆ 4mA Output Source Current
- ◆ 1mA Output Sink Current
- ◆  $\pm$ 0.4% (max) Initial Accuracy
- ◆ 40ppm/ $^{\circ}$ C (max) Temperature Coefficient
- ◆ 2.5V to 12.6V Supply Range
- ◆ Low 200mV Dropout
- ◆ Stable with Capacitive Loads Up to 10 $\mu$ F
- ◆ No External Capacitors Required
- ◆ Miniature 5-Pin SOT23 Package

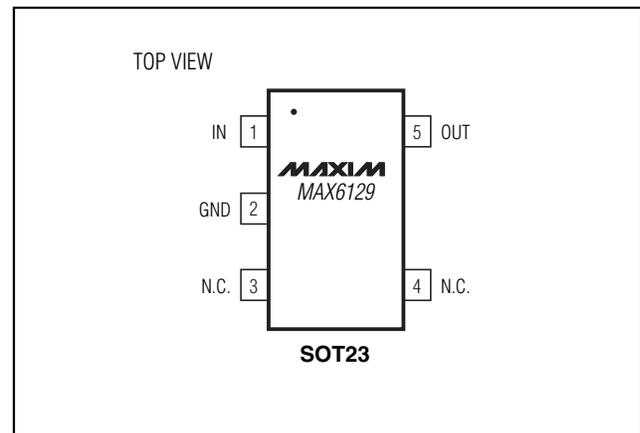

## Ordering Information

PART	TEMP RANGE	PIN-PACKAGE	OUTPUT VOLTAGE (V)
MAX6129_EUK21-T	-40 $^{\circ}$ C to +85 $^{\circ}$ C	5 SOT23-5	2.048
MAX6129_EUK25-T	-40 $^{\circ}$ C to +85 $^{\circ}$ C	5 SOT23-5	2.500
MAX6129_EUK30-T	-40 $^{\circ}$ C to +85 $^{\circ}$ C	5 SOT23-5	3.000
MAX6129_EUK33-T	-40 $^{\circ}$ C to +85 $^{\circ}$ C	5 SOT23-5	3.300
MAX6129_EUK41-T	-40 $^{\circ}$ C to +85 $^{\circ}$ C	5 SOT23-5	4.096
MAX6129_EUK50-T	-40 $^{\circ}$ C to +85 $^{\circ}$ C	5 SOT23-5	5.000

**Note:** The MAX6129 is available in A or B grades. Choose the desired grade from the Selector Guide and insert the suffix in the blank above to complete the part number.

**Selector Guide appears at end of data sheet.**

## Pin Configuration

# Ultra-Low-Power Series Voltage Reference

## ABSOLUTE MAXIMUM RATINGS

IN to GND .....-0.3V to +13V  
 OUT to GND .....-0.3V to the lower of +6V and ( $V_{IN} + 0.3V$ )  
 Output to GND Short-Circuit Duration.....Continuous  
 Continuous Power Dissipation ( $T_A = +70^\circ\text{C}$ )  
 5-Pin SOT23 (derate 7.1mW/ $^\circ\text{C}$  above  $+70^\circ\text{C}$ ).....571mW

Operating Temperature Range .....-40 $^\circ\text{C}$  to +85 $^\circ\text{C}$   
 Storage Temperature Range .....-65 $^\circ\text{C}$  to +150 $^\circ\text{C}$   
 Lead Temperature (soldering, 10s) .....+300 $^\circ\text{C}$

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## ELECTRICAL CHARACTERISTICS—MAX6129\_21 ( $V_{OUT} = 2.048V$ )

( $V_{IN} = 2.5V$ ,  $I_{OUT} = 0$ ,  $T_A = T_{MIN}$  to  $T_{MAX}$ , unless otherwise noted. Typical values are at  $T_A = +25^\circ\text{C}$ .) (Note 1)

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS

		I <sub>OUT</sub> = 4mA			200		
Output Short-Circuit Current	I <sub>SC</sub>			25		mA	
Long-Term Stability	ΔV <sub>OUT</sub> /time	1000 hours at +25°C		150		ppm	
Thermal Hysteresis		(Note 4)		140		ppm	
<b>DYNAMIC CHARACTERISTICS</b>							
Noise Voltage	e <sub>OUT</sub>	f = 0.1Hz to 10Hz		90		μV <sub>P-P</sub>	
		f = 10Hz to 1kHz		245		μV <sub>RMS</sub>	
Ripple Rejection	ΔV <sub>OUT</sub> /ΔV <sub>IN</sub>	V <sub>IN</sub> = 5.2V ±200mV, f = 120Hz		38		dB	
Turn-On Settling Time	t <sub>R</sub>	To V <sub>OUT</sub> = 0.1% of final value		1.4		ms	
<b>INPUT</b>							
Supply Voltage Range	V <sub>IN</sub>		5.2		12.6	V	
Supply Current	I <sub>IN</sub>				10.5	μA	
Change in Supply Current	I <sub>IN</sub> /V <sub>IN</sub>	V <sub>IN</sub> = 5.2V to 12.6V			1.5	μA/V	

**Note 1:** MAX6129 is 100% production tested at T<sub>A</sub> = +25°C and is guaranteed by design for T<sub>A</sub> = T<sub>MIN</sub> to T<sub>MAX</sub> as specified.

**Note 2:** Temperature coefficient is defined by box method: (V<sub>MAX</sub> - V<sub>MIN</sub>)/(ΔT × V<sub>+25°C</sub>).

**Note 3:** Not production tested. Guaranteed by design.

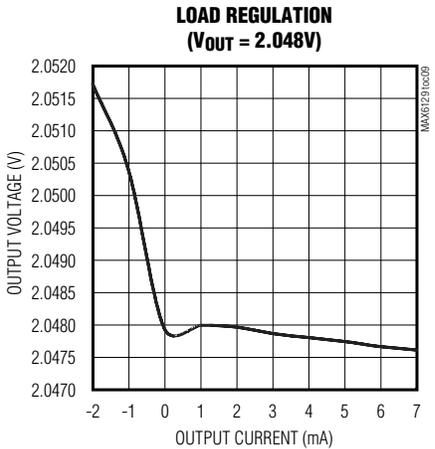

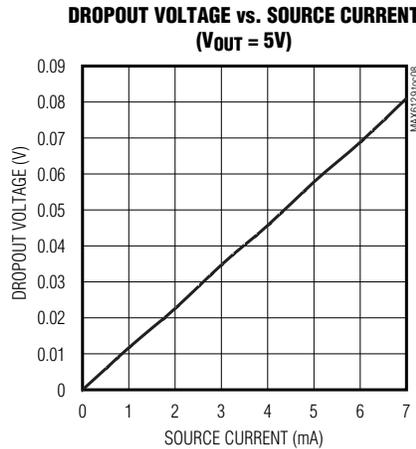

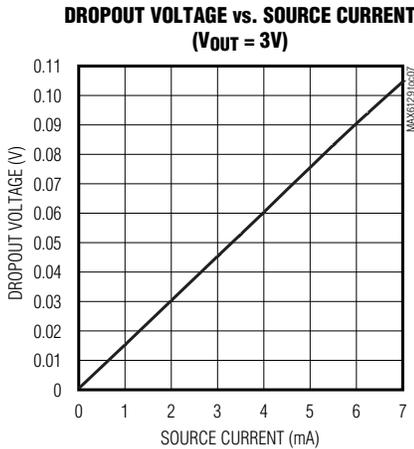

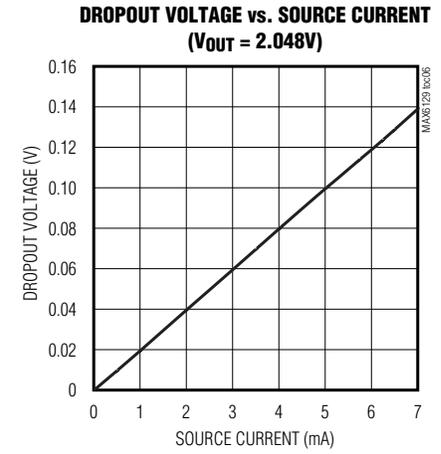

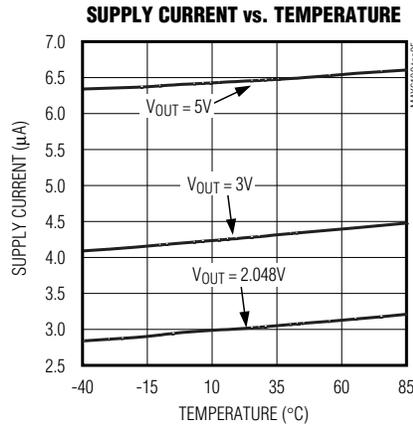

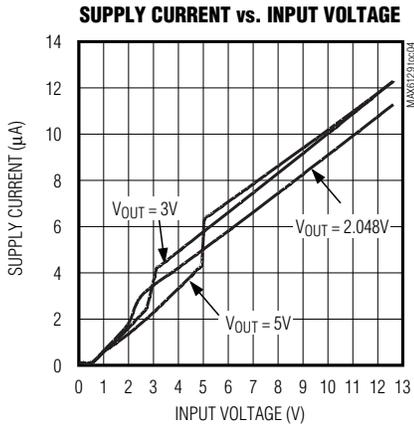

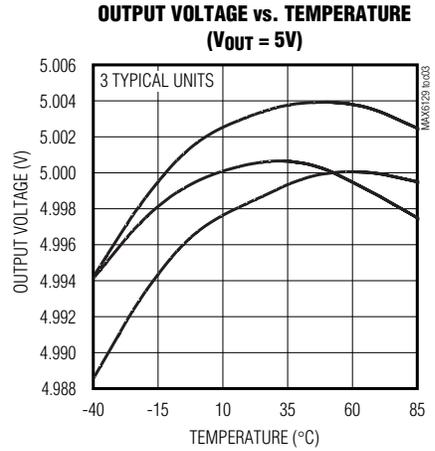

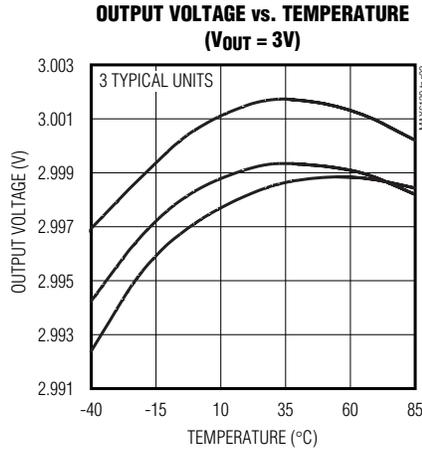

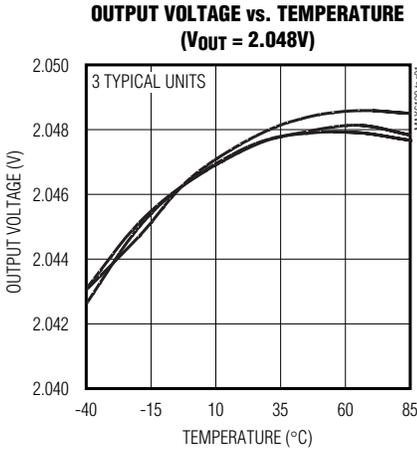

**Note 4:** Thermal hysteresis is defined as the change in T<sub>A</sub> = +25°C output voltage before and after temperature cycling of the device (from T<sub>A</sub> = T<sub>MIN</sub> to T<sub>MAX</sub>). Initial measurement at T<sub>A</sub> = +25°C is followed by temperature cycling the device to T<sub>A</sub> = +85°C then to T<sub>A</sub> = -40°C and another measurement at T<sub>A</sub> = +25°C is compared to the original measurement at T<sub>A</sub> = +25°C.

**Note 5:** Dropout voltage is the minimum input voltage at which V<sub>OUT</sub> changes by 0.1% from V<sub>OUT</sub> at rated V<sub>IN</sub> and is guaranteed by Load Regulation Test.

## Pin Description

PIN	NAME	FUNCTION
1	IN	Positive Voltage Supply
2	GND	Ground
3, 4	N.C.	Internally connected. Leave unconnected or connect to ground.
5	OUT	Reference Output

## Applications Information

### Input Bypassing

The MAX6129 does not require an input bypass capacitor. For improved transient performance, bypass the input to ground with a 0.1 $\mu$ F ceramic capacitor. Place the capacitor as close to IN as possible.

### Load Capacitance

The MAX6129 does not require an output capacitor for stability. The MAX6129 is stable driving capacitive loads from 0 to 100pF and 0.1 $\mu$ F to 10 $\mu$ F when sourcing current and from 0 to 0.4 $\mu$ F when sinking current. In applications where the load or the supply can experience step changes, an output capacitor reduces the amount of overshoot (undershoot) and improves the circuit's transient response. Many applications do not require an external capacitor, and the MAX6129 offers a significant advantage in applications where board space is critical.

### Supply Current

The quiescent supply current of the series-mode MAX6129 is very small, 5.25 $\mu$ A (max), and is very stable against changes in the supply voltage with only 1.5 $\mu$ A/V (max) variation with supply voltage. The MAX6129 family draws load current from the input voltage source only when required, so supply current is not wasted and efficiency is maximized at all input voltages. This improved efficiency reduces power dissipation and extends battery life.

### Output Thermal Hysteresis

Output thermal hysteresis is the change of output voltage at  $T_A = +25^\circ\text{C}$  before and after the device is cycled over its entire operating temperature range. Hysteresis is caused by differential package stress appearing across the device.

### Temperature Coefficient vs. Operating Temperature Range for a 1LSB Maximum Error

In a data converter application, the reference voltage of the converter must stay within a certain limit to keep the error in the data converter smaller than the resolution limit through the operating temperature range. Figure 1 shows the maximum allowable reference voltage temperature coefficient to keep the conversion error to less than 1LSB, as a function of the operating temperature range ( $T_{MAX} - T_{MIN}$ ) with the converter resolution as a parameter. The graph assumes the reference-voltage temperature coefficient as the only parameter affecting accuracy.

MAX6129AEUK50	5.000	0.4	40	ADRU
MAX6129BEUK50	5.000	1	100	ADRV

\*Future product—contact factory for availability.

In reality, the absolute static accuracy of a data converter is dependent on the combination of many parameters such as integral nonlinearity, differential nonlinearity, offset error, gain error, as well as voltage reference changes.

### Turn-On Time

These devices typically turn on and settle to within 0.1% of their final value in less than 1.4ms. The turn-on time increases when heavily loaded and operating close to dropout.

### Positive and Negative Low-Power Voltage Reference

Figure 2 shows a typical method for developing a bipolar reference. The circuit uses a MAX681 voltage doubler/inverter charge-pump converter to power a MAX480, creating a positive as well as a negative reference voltage.

### Chip Information

TRANSISTOR COUNT: 30

PROCESS: BiCMOS

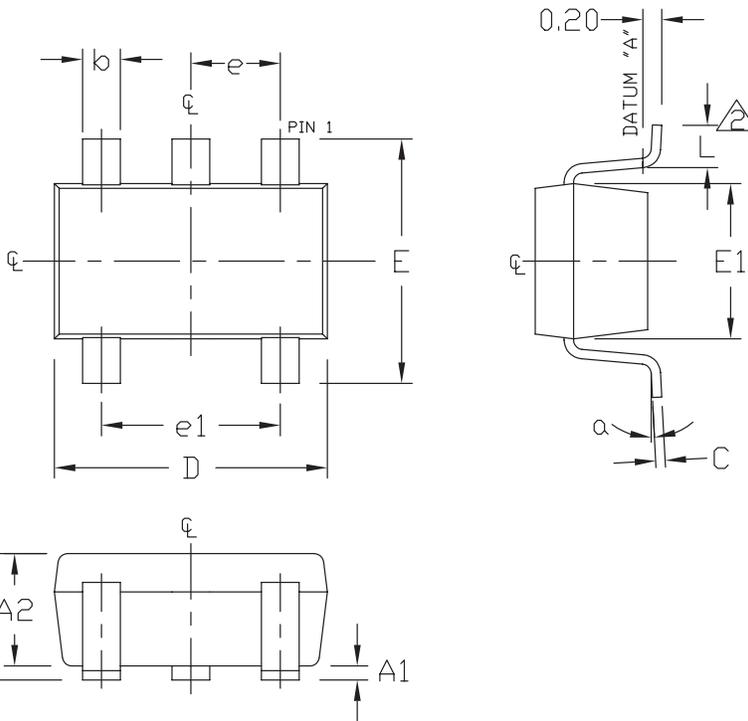

# Ultra-Low-Power Series Voltage Reference

## Package Information

(The package drawing(s) in this data sheet may not reflect the most current specifications. For the latest package outline information, go to [www.maxim-ic.com/packages](http://www.maxim-ic.com/packages).)

**MAX6129**

SOT-23

SYMBOL	MIN	MAX
A	0.90	1.45
A1	0.00	0.15
A2	0.90	1.30
b	0.35	0.50
C	0.08	0.20
E	2.60	3.00
E1	1.50	1.75
L	0.35	0.55
e	0.95 REF	
e1	1.90 REF	
α	0°	10°

**NOTES:**

1. ALL DIMENSIONS ARE IN MILLIMETERS.
2. FOOT LENGTH MEASURED AT INTERCEPT POINT BETWEEN DATUM A & LEAD SURFACE.
3. PACKAGE OUTLINE EXCLUSIVE OF MOLD FLASH & METAL BURR.
4. PACKAGE OUTLINE INCLUSIVE OF SOLDER PLATING.
5. MEETS JEDEC MO178.
