## HDSP-K40x Series

## 14.2 mm ( 0.56 inch $)$ Seven Segment Displays

TECHNOLOGIES

## Data Sheet

HDSP-K40x Series
HDSP-550x Series/ -552x Series
HDSP-560x Series/ -562x Series
HDSP-570x Series/ -572x Series
HDSP-H15x Series/ -H40x Series

## Description

The 14.2 mm ( 0.56 inch) LED seven segment displays are designed for viewing distances up to 7 metres (23 feet). These devices use an industry standard size package and pinout. Both the numeric and $\pm 1$ overflow devices feature a right hand decimal point. All devices are available as either common anode or common cathode.

## Features

- Industry standard size
- Industry standard pinout
15.24 mm ( 0.6 in .) DIP leads on 2.54 mm ( 0.1 in .) centers
- Choice of Colors

AlGaAs Red, High Efficiency Red, Yellow, Green, Orange

- Excellent appearance

Evenly lighted segments
M itered corners on segments
Gray package gives optimum contrast
$\pm 50^{\circ}$ viewing angle

Features, continued

- Design flexibility

Common anode or common cathode
Single and dual digits
Right hand decimal point
$\pm 1$. overflow character

- Categorized for luminous intensity

Yellow and Green categorized for color Use of like categories yields a uniform display

- High light output
- High peak current
- Excellent for long digit string multiplexing
- Intensity and color selection option

See Intensity and Color Selected Displays Data Sheet

- Sunlight view able AIGaAs

Devices

| K403 |  | 5523 | 5723 | 5623 | Two Digit Common Cathode Right Hand Decimal | F |

## Note:

1. These displays are recommended for high ambient light operation. Please refer to the HDSP-H10X/K12X AIGaAs and HDSP-555X HER data sheet for low current operation.

These displays are ideal for most applications. Pin for pin equivalent displays are also available in a low current design. The low current displays are ideal
for portable applications. For additional information see the Low Current Seven Segment Displays data sheet.

## Part Numbering System

## Notes:

1. Device case temperature is $25^{\circ} \mathrm{C}$ prior to the intensity measurement.
2. The digits are categorized for luminous intensity. The intensity category is designated by a letter on the side of the package.
3. The dominant wavelength, $\lambda_{d}$, is derived from the CIE chromaticity diagram and is that single wavelength which defines the color of the device.
4. Typical specification for reference only. Do not exceed absolute maximum ratings.
5. For low current operation, the AIGaAs HDSP-H10X series displays are recommended. They are tested at $1 \mathrm{mAdc} /$ segment and are pin for pin compatible with the HDSP-H15X series.
6. For low current operation, the HER HDSP-555X series displays are recommended. They are tested at $2 \mathrm{~mA} \mathrm{dc} /$ segment and are pin for pin compatible with the HDSP-550X series.
7. The Yellow (HDSP-5700) and Green (HDSP-5600) displays are categorized for dominant wavelength. The category is designated by a number adjacent to the luminous intensity category letter.
