Note 1: Supply initiation voltage is the value of DC supply voltage required to start the tone ringer oscillating.

Note 2: Sustaining voltage is the value of DC supply voltage required to maintain the oscillation.

Note 3: Oscillator frequency is determined by the following equations:

$$f_L = 1/(1.359 \times R1 \times C1) \text{ (Hz)}$$

$$f_{H1} = 1/(1.518 \times R2 \times C2) \text{ (Hz)}$$

$$f_{H2} = 1.214 \times f_{H1} \text{ (Hz)}$$

Note 4: V_{tr} and I_{tr} the conditions applied to trigger input to start oscillation for V_{sus} ≤ V_{cc} ≤ V_{si}.

Note 5: Trigger current must be limited to this value externally.

Note 6: V_{dis} and I_{dis} are the conditions applied to trigger input to inhibit oscillation for V_{si} ≤ V_{cc}.
