

# BIPOLAR ANALOG INTEGRATED CIRCUIT $\mu$ PC1335V

T-74-65-01

## AUDIO POWER AMPLIFIER

### DESCRIPTION

The  $\mu$ PC1335V is a class B dual audio power amplifier designed for a music center and a radio cassette, and is encapsulated in a new 14 Pins vertical dual in line plastic package.

### FEATURES

- High output power.
  - 20 W (TYP.) @  $V_{CC} = 18$  V,  $R_L = 8 \Omega$  (BTL)
  - 5.5 W/ch (TYP.) @  $V_{CC} = 18$  V,  $R_L = 8 \Omega$
  - 7 W/ch (TYP.) @  $V_{CC} = 15$  V,  $R_L = 4 \Omega$
  - 5.7 W/ch (TYP.) @  $V_{CC} = 12$  V,  $R_L = 3 \Omega$
  - 4.6 W/ch (TYP.) @  $V_{CC} = 12$  V,  $R_L = 4 \Omega$
- Wide operating voltage range.  $V_{CC} = 6$  to 20 V
- Low quiescent current.  $I_{CC} = 23$  mA (TYP.) @  $V_{CC} = 15$  V
- Low noise.  $N_L = 0.25$  mV<sub>r.m.s.</sub> (TYP.)
- High supply voltage rejection. SVR = 55 dB (TYP.)
- No shock noise at power supply switch on and off.
- Soft clipping wave form.
- Thermal shut down circuit is built in.
- Low thermal resistance:  $R_{\theta(j-c)} = 3^\circ\text{C/W}$
- Very low number of external components, very simple mounting system with no electrical isolation between the package and the heat sink. (one screw only)

NOTES FOR USE

T-74-05-01

- (1) Adding a capacitor for phase compensation between Pin 1 (13) to Pin 3 (11), its value less than 47 pF is recommended, and the value of  $R_1$  ( $R_2$ ) and of  $C_6$  ( $C_9$ ) have to be chosen as follows.

$$R_1 (R_2) = 1 \Omega$$

$$C_6 (C_9) = 0.15 \mu\text{F}$$

- (2) At muting by shortage of Pin 7 to GND, ripple rejection is determined by following equation.

$$\text{SVR} = \left| 20 \log \frac{R_L}{200 + R_L} \right|$$

- (3) Keep the  $\mu\text{PC1336V}$ 's heat sink in shortage to GND or floating condition.  
(4) Direct shortage between Pin 1 (13) to  $V_{CC}$  or GND will damage the  $\mu\text{PC1336V}$ .  
(5) Keep some margin at design of external heat sink size.  
(6) Use silicon grease and keep the torque of screw driver less than 10 kg·cm in attachment of a external heat sink.
