## SN74LS393

## Dual 4-Stage Binary Counter

The SN74LS393 contains a pair of high-speed 4-stage ripple counters.

Each half of the LS393 operates as a Modulo-16 binary divider, with the last three stages triggered in a ripple fashion. In the LS393, the flip-flops are triggered by a HIGH-to-LOW transition of their CP inputs. Each half of each circuit type has a Master Reset input which responds to a HIGH signal by forcing all four outputs to the LOW state.

- Dual Versions
- Individual Asynchronous Clear for Each Counter
- Typical Max Count Frequency of 50 MHz
- Input Clamp Diodes Minimize High Speed Termination Effects

a) 1 TTL Unit Load (U.L.) $=40 \mu \mathrm{~A}$ HIGH/ 1.6 mA LOW.

## FUNCTIONAL DESCRIPTION

Each half of the SN74LS393 operates in the Modulo 16 binary sequence, as indicated in the $\div 16$ Truth Table. The first flip-flop is triggered by HIGH-to-LOW transitions of the CP input signal. Each of the other flip-flops is triggered by a HIGH-to-LOW transition of the Q output of the preceding flip-flop. Thus state changes of the Q outputs do
not occur simultaneously. This means that logic signals derived from combinations of these outputs will be subject to decoding spikes and, therefore, should not be used as clocks for other counters, registers or flip-flops. A HIGH signal on MR forces all outputs to the LOW state and prevents counting.
