### 2.5V/3.3V 16-bit edge-triggered D-type flip-flop (3-State)

## 74ALVT16374

## FEATURES

- 16-bit edge-triggered flip-flop
- 5 V I/O compatibile
- 3-State buffers
- Output capability: +64mA/-32mA
- TTL input and output switching levels
- Input and output interface capability to systems at 5V supply
- Bus-hold data inputs eliminate the need for external pull-up resistors to hold unused inputs
- Live insertion/extraction permitted
- Power-up reset
- Power-up 3-State
- No bus current loading when output is tied to 5 V bus
- Latch-up protection exceeds 500mA per JEDEC Std 17
- ESD protection exceeds 2000V per MIL STD 883 Method 3015 and 200V per Machine Model

## DESCRIPTION

The 74ALVT16374 is a high-performance BiCMOS product designed for $\mathrm{V}_{\mathrm{CC}}$ operation at 2.5 V or 3.3 V with I/O compatibility up to 5 V .

This device is a 16-bit edge-triggered D-type flip-flop featuring non-inverting 3-State outputs. The device can be used as two 8-bit flip-flops or one 16-bit flip-flop. On the positive transition of the clock (CP), the Q outputs of the flip-flop take on the logic levels set up at the D inputs.

NOTES:

1. Stresses beyond those listed may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
2. The performance capability of a high-performance integrated circuit in conjunction with its thermal environment can create junction temperatures which are detrimental to reliability. The maximum junction temperature of this integrated circuit should not exceed $150^{\circ} \mathrm{C}$.
3. The input and output negative voltage ratings may be exceeded if the input and output clamp current ratings are observed.

## NOTES:

1. All typical values are at $\mathrm{V}_{\mathrm{CC}}=3.3 \mathrm{~V}$ and $\mathrm{T}_{\text {amb }}=25^{\circ} \mathrm{C}$.
2. This is the increase in supply current for each input at the specified voltage level other than $\mathrm{V}_{\mathrm{CC}}$ or GND
3. This parameter is valid for any $\mathrm{V}_{C C}$ between 0 V and 1.2 V with a transition time of up to 10 msec . From $\mathrm{V}_{C C}=1.2 \mathrm{~V}$ to $\mathrm{V}_{C C}=3.3 \mathrm{~V} \pm 0.3 \mathrm{~V}$ a transition time of $100 \mu \mathrm{sec}$ is permitted. This parameter is valid for $\mathrm{T}_{\mathrm{amb}}=25^{\circ} \mathrm{C}$ only.
4. Unused pins at $\mathrm{V}_{\mathrm{CC}}$ or GND.
5. $\mathrm{I}_{\mathrm{CCZ}}$ is measured with outputs pulled up to $\mathrm{V}_{\mathrm{CC}}$ or pulled down to ground.
6. For valid test results, data must not be loaded into the flip-flops (or latches) after applying power.
7. This is the bus hold overdrive current required to force the input to the opposite logic state.

## Definitions

Short-form specification - The data in a short-form specification is extracted from a full data sheet with the same type number and title. For detailed information see the relevant data sheet or data handbook.
Limiting values definition - Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.
Application information - Applications that are described herein for any of these products are for illustrative purposes only. Philips Semiconductors make no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

## Disclaimers

Life support - These products are not designed for use in life support appliances, devices or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips Semiconductors customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips Semiconductors for any damages resulting from such application.
Right to make changes - Philips Semiconductors reserves the right to make changes, without notice, in the products, including circuits, standard cells, and/or software, described or contained herein in order to improve design and/or performance. Philips Semiconductors assumes no responsibility or liability for the use of any of these products, conveys no license or title under any patent, copyright, or mask work right to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work right infringement, unless otherwise specified.
