

RO2103

- **Ideal for 418 MHz Transmitters**
- **Very Low Series Resistance**
- **Quartz Stability**
- **Rugged, Hermetic, Low-Profile TO39 Case**
- **Complies with Directive 2002/95/EC (RoHS)**

**418.0 MHz
SAW
Resonator**

The RO2103 is a true one-port, surface-acoustic-wave (SAW) resonator in a low-profile TO39 case. It provides reliable, fundamental-mode, quartz frequency stabilization of fixed-frequency transmitters operating at 418.0 MHz. The RO2103 is designed specifically for remote-control and wireless security transmitters operating in the United Kingdom under dTI MPT 1340 and in the USA under FCC Part 15.

TO39-3 Case

Absolute Maximum Ratings

Rating	Value	Units
CW RF Power Dissipation (See: Typical Test Circuit)	+0	dBm
DC Voltage Between Any Two Pins (Observe ESD Precautions)	±30	VDC
Case Temperature	-40 to +85	°C

Electrical Characteristics

Characteristic	Sym	Notes	Minimum	Typical	Maximum	Units
Center Frequency (+25 °C) Absolute Frequency	f_C	2, 3, 4, 5	417.925		418.075	MHz
	Tolerance from 418.000 MHz					
Insertion Loss	IL	2, 5, 6		1.6	2.0	dB
Quality Factor	Unloaded Q	5, 6, 7		12,100		
	50 Ω Loaded Q					
Temperature Stability	Turnover Temperature	T_O	20	35	50	°C
	Turnover Frequency	f_O	6, 7, 8	$f_C + 1.3$		kHz
	Frequency Temperature Coefficient	FTC		0.037		ppm/°C ²
Frequency Aging	Absolute Value during the First Year	$ f_A $	1	≤10		ppm/yr
DC Insulation Resistance between Any Two Pins		5	1.0			M Ω
RF Equivalent RLC Model	Motional Resistance	R_M	5, 7, 9	20	26	Ω
	Motional Inductance	L_M		91.0109		μ H
	Motional Capacitance	C_M		1.59292		fF
	Pin 1 to Pin 2 Static Capacitance	C_O		1.7	2.0	2.3
	Transducer Static Capacitance	C_P	5, 6, 7, 9	1.7		pF
Test Fixture Shunt Inductance	L_{TEST}	2, 7		83		nH
Lid Symbolization (in Addition to Lot and/or Date Codes)	RFM RO2103					

CAUTION: Electrostatic Sensitive Device. Observe precautions for handling.

Notes:

1. Frequency aging is the change in f_C with time and is specified at +65°C or less. Aging may exceed the specification for prolonged temperatures above +65°C. Typically, aging is greatest the first year after manufacture, decreasing significantly in subsequent years.
2. The center frequency, f_C , is measured at the minimum insertion loss point, IL_{MIN} , with the resonator in the 50 Ω test system (VSWR ≤ 1.2:1). The shunt inductance, L_{TEST} , is tuned for parallel resonance with C_O at f_C . Typically, $f_{OSCILLATOR}$ or $f_{TRANSMITTER}$ is less than the resonator f_C .
3. One or more of the following United States patents apply: 4,454,488 and 4,616,197 and others pending.
4. Typically, equipment designs utilizing this device require emissions testing and government approval, which is the responsibility of the equipment manufacturer.
5. Unless noted otherwise, case temperature $T_C = +25^\circ\text{C} \pm 2^\circ\text{C}$.
6. The design, manufacturing process, and specifications of this device are subject to change without notice.
7. Derived mathematically from one or more of the following directly measured parameters: f_C , IL, 3 dB bandwidth, f_C versus T_C , and C_O .
8. Turnover temperature, T_O , is the temperature of maximum (or turnover) frequency, f_O . The nominal frequency at any case temperature, T_C , may be calculated from: $f = f_O [1 - FTC (T_O - T_C)^2]$. Typically, *oscillator* T_O is 20°C less than the specified *resonator* T_O .
9. This equivalent RLC model approximates resonator performance near the resonant frequency and is provided for reference only. The capacitance C_O is the static (nonmotional) capacitance between pin1 and pin 2 measured at low frequency (10 MHz) with a capacitance meter. The measurement includes case parasitic capacitance with a floating case. For usual grounded case applications (with ground connected to either pin 1 or pin 2 and to the case), add approximately 0.25 pF to C_O .

Electrical Connections

This one-port, two-terminal SAW resonator is bidirectional. The terminals are interchangeable with the exception of circuit board layout.

Pin	Connection
1	Terminal 1
2	Terminal 2
3	Case Ground

Temperature Characteristics

The curve shown on the right accounts for resonator contribution only and does not include oscillator temperature characteristics.

Typical Test Circuit

The test circuit inductor, L_{TEST} , is tuned to resonate with the static capacitance, C_o at F_c .

Electrical Test:

Equivalent LC Model

The following equivalent LC model is valid near resonance:
