MUTE STAND-BY FUNCTION

The pin 4 (MUTE/STAND-BY) controls the amplifier status by two different thresholds, referred to +Vs.

- When V_{pin4} higher than $+V_s - 2.5V$ the amplifier is in Stand-by mode and the final stage generators are off.

- When V_{pin4} is between $+V_s - 2.5V$ and $+V_s - 6V$ the final stage current generators are switched on and the amplifier is in mute mode.
- When V_{pin4} is lower than $+V_s - 6V$ the amplifier is play mode.
