implementation control-function minimizes external timing requirements.

The 'ABT16863 can be used as two 9-bit transceivers or one 18-bit transceiver. They allow data transmission from the A bus to the B bus or from the B bus to the A bus, depending on the logic level at the output-enable (OEAB or OEBA)

inputs.		,	,

logic diagram (positive logic)

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)[†]

Supply voltage range, V _{CC} Input voltage range, V _I (except I/O ports) (see Note 1)	
Voltage range applied to any output in the high or power-off state, V_0	
Current into any output in the low state, IO: SN54ABT16863	96 mA
SN74ABT16863	128 mA
Input clamp current, I _{IK} (V _I < 0)	–18 mA
Output clamp current, I _{OK} (V _O < 0)	–50 mA
Package thermal impedance, θ_{JA} (see Note 2): DL package	
Storage temperature range, T _{stg}	

† Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. The input and output negative-voltage ratings may be exceeded if the input and output clamp-current ratings are observed.

2. The package thermal impedance is calculated in accordance with EIA/JEDEC Std JESD51.

recommended operating conditions (see Note 3)

					SN74ABT16863		UNIT
		MIN	MAX	MIN	MAX	UNIT	
Vcc	Supply voltage	4.5	5.5	4.5	5.5	V	
VIH	High-level input voltage		2	W	2		V
VIL	Low-level input voltage		0.8		0.8	V	
VI	Input voltage	0	Vcc	0	VCC	V	
ЮН	High-level output current					-32	mA
IOL	Low-level output current					64	mA
$\Delta t/\Delta v$	Input transition rise or fall rate	Outputs enabled	04	10		10	ns/V
Δt/ΔV _{CC}	Power-up ramp rate	Q 200		200		μs/V	
TA	Operating free-air temperature	-55	125	-40	85	°C	

NOTE 3: Unused pins (input or I/O) must be held high or low to prevent them from floating.

C _{io}	A or B ports	$V_0 = 2.5 \text{ V or } 0.5 \text{ V}$	V _O = 2.5 V or 0.5 V		9.5						pF

* On products compliant to MIL-PRF-38535, this parameter does not apply.

[†] All typical values are at $V_{CC} = 5 V$.

[‡] This parameter is characterized, but not production tested.

[§] The parameters I_{OZH} and I_{OZL} include the input leakage current.

Not more than one output should be tested at a time, and the duration of the test should not exceed one second.

[#]This is the increase in supply current for each input that is at the specified TTL voltage level rather than V_{CC} or GND.

SCBS225C - JUNE 1992 - REVISED MAY 1997

PARAMETER MEASUREMENT INFORMATION

NOTES: A. C_I includes probe and jig capacitance.

B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.

C. All input pulses are supplied by generators having the following characteristics: PRR \leq 10 MHz, Z_O = 50 Ω , t_f \leq 2.5 ns. t_f \leq 2.5 ns.

D. The outputs are measured one at a time with one transition per measurement.

Figure 1. Load Circuit and Voltage Waveforms

IMPORTANT NOTICE

Texas Instruments and its subsidiaries (TI) reserve the right to make changes to their products or to discontinue any product or service without notice, and advise customers to obtain the latest version of relevant information to verify, before placing orders, that information being relied on is current and complete. All products are sold subject to the terms and conditions of sale supplied at the time of order acknowledgement, including those pertaining to warranty, patent infringement, and limitation of liability.

TI warrants performance of its semiconductor products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

CERTAIN APPLICATIONS USING SEMICONDUCTOR PRODUCTS MAY INVOLVE POTENTIAL RISKS OF DEATH, PERSONAL INJURY, OR SEVERE PROPERTY OR ENVIRONMENTAL DAMAGE ("CRITICAL APPLICATIONS"). TI SEMICONDUCTOR PRODUCTS ARE NOT DESIGNED, AUTHORIZED, OR WARRANTED TO BE SUITABLE FOR USE IN LIFE-SUPPORT DEVICES OR SYSTEMS OR OTHER CRITICAL APPLICATIONS. INCLUSION OF TI PRODUCTS IN SUCH APPLICATIONS IS UNDERSTOOD TO BE FULLY AT THE CUSTOMER'S RISK.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards must be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance or customer product design. TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such semiconductor products or services might be or are used. TI's publication of information regarding any third party's products or services does not constitute TI's approval, warranty or endorsement thereof.
