FQPF17N40

400V N-Channel MOSFET

General Description

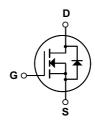

These N-Channel enhancement mode power field effect transistors are produced using Fairchild's proprietary, planar stripe, DMOS technology.

This advanced technology has been especially tailored to minimize on-state resistance, provide superior switching performance, and withstand high energy pulse in the avalanche and commutation mode. These devices are well suited for high efficiency switch mode power supply, electronic lamp ballast based on half bridge.

- Low Crss (typical 30 pF)
- · Fast switching
- · 100% avalanche tested
- · Improved dv/dt capability
