

- Low Supply-Voltage Range, 1.8 V to 3.6 V
- Ultralow-Power Consumption:
 - Active Mode: 365 μ A at 1 MHz, 2.2 V
 - Standby Mode (VLO): 0.5 μ A
 - Off Mode (RAM Retention): 0.1 μ A
- Wake-Up From Standby Mode in Less Than 1 μ s
- 16-Bit RISC Architecture, 62.5-ns Instruction Cycle Time
- Three-Channel Internal DMA
- 12-Bit Analog-to-Digital (A/D) Converter With Internal Reference, Sample-and-Hold, and Autoscan Feature
- Dual 12-Bit Digital-to-Analog (D/A) Converters With Synchronization
- 16-Bit Timer_A With Three Capture/Compare Registers
- 16-Bit Timer_B With Seven Capture/Compare-With-Shadow Registers
- On-Chip Comparator
- Four Universal Serial Communication Interfaces (USCI)
 - USCI_A0 and USCI_A1
 - Enhanced UART Supporting Auto-Baudrate Detection
 - IrDA Encoder and Decoder
 - Synchronous SPI
 - USCI_B0 and USCI_B1
 - I²C™
 - Synchronous SPI
- Supply Voltage Supervisor/Monitor With Programmable Level Detection
- Brownout Detector
- Bootstrap Loader
- Serial Onboard Programming, No External Programming Voltage Needed Programmable Code Protection by Security Fuse
- Family Members Include:
 - MSP430F2416: 92KB+256B Flash Memory, 4KB RAM
 - MSP430F2417: 92KB+256B Flash Memory, 8KB RAM
 - MSP430F2418: 116KB+256B Flash Memory, 8KB RAM
 - MSP430F2419: 120KB+256B Flash Memory, 4KB RAM
 - MSP430F2616: 92KB+256B Flash Memory, 4KB RAM
 - MSP430F2617: 92KB+256B Flash Memory, 8KB RAM
 - MSP430F2618: 116KB+256B Flash Memory, 8KB RAM
 - MSP430F2619: 120KB+256B Flash Memory, 4KB RAM
- Available in 80-Pin Quad Flat Pack (QFP), 64-Pin QFP, and 113-Pin Ball Grid Array (BGA)[†] (See Available Options)
- For Complete Module Descriptions, See the *MSP430x2xx Family User's Guide*, Literature Number SLAU144

[†] The MSP430F241x devices are identical to the MSP430F261x devices, with the exception that the DAC12 modules and the DMA controller are not implemented.

description

The Texas Instruments MSP430 family of ultralow-power microcontrollers consists of several devices featuring different sets of peripherals targeted for various applications. The architecture, combined with five low-power modes is optimized to achieve extended battery life in portable measurement applications. The device features a powerful 16-bit RISC CPU, 16-bit registers, and constant generators that contribute to maximum code efficiency. The calibrated digitally controlled oscillator (DCO) allows wake-up from low-power modes to active mode in less than 1 μ s.

The MSP430F261x/241x series are microcontroller configurations with two built-in 16-bit timers, a fast 12-bit A/D converter, a comparator, dual 12-bit D/A converters, four universal serial communication interface (USCI) modules, DMA, and up to 64 I/O pins. The MSP430F241x devices are identical to the MSP430F261x devices, with the exception that the DAC12 and the DMA modules are not implemented.

Typical applications include sensor systems, industrial control applications, hand-held meters, etc.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

I²C is a registered trademark of Philips Incorporated.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

short-form description

CPU

The MSP430 CPU has a 16-bit RISC architecture that is highly transparent to the application. All operations, other than program-flow instructions, are performed as register operations in conjunction with seven addressing modes for source operand and four addressing modes for destination operand.

The CPU is integrated with 16 registers that provide reduced instruction execution time. The register-to-register operation execution time is one cycle of the CPU clock.

Four of the registers, R0 to R3, are dedicated as program counter, stack pointer, status register, and constant generator, respectively. The remaining registers are general-purpose registers.

Peripherals are connected to the CPU using data, address, and control buses, and can be handled with all instructions.

instruction set

The instruction set consists of 51 instructions with three formats and seven address modes. Each instruction can operate on word and byte data. Table 1 shows examples of the three types of instruction formats; the address modes are listed in Table 2.

Program Counter	PC/R0
Stack Pointer	SP/R1
Status Register	SR/CG1/R2
Constant Generator	CG2/R3
General-Purpose Register	R4
General-Purpose Register	R5
General-Purpose Register	R6
General-Purpose Register	R7
General-Purpose Register	R8
General-Purpose Register	R9
General-Purpose Register	R10
General-Purpose Register	R11
General-Purpose Register	R12
General-Purpose Register	R13
General-Purpose Register	R14
General-Purpose Register	R15

Table 1. Instruction Word Formats

Dual operands, source-destination	e.g., ADD R4,R5	R4 + R5 ---> R5
Single operands, destination only	e.g., CALL R8	PC --->(TOS), R8---> PC
Relative jump, un/conditional	e.g., JNE	Jump-on-equal bit = 0

Table 2. Address Mode Descriptions

ADDRESS MODE	S	D	SYNTAX	EXAMPLE	OPERATION
Register	●	●	MOV Rs,Rd	MOV R10,R11	R10 ---> R11
Indexed	●	●	MOV X(Rn),Y(Rm)	MOV 2(R5),6(R6)	M(2+R5)---> M(6+R6)
Symbolic (PC relative)	●	●	MOV EDE,TONI		M(EDE) ---> M(TONI)
Absolute	●	●	MOV &MEM,&TC DAT		M(MEM) ---> M(TCDAT)
Indirect	●		MOV @Rn,Y(Rm)	MOV @R10,Tab(R6)	M(R10) ---> M(Tab+R6)
Indirect autoincrement	●		MOV @Rn+,Rm	MOV @R10+,R11	M(R10) ---> R11 R10 + 2---> R10
Immediate	●		MOV #X,TONI	MOV #45,TONI	#45 ---> M(TONI)

NOTE: S = source D = destination

MSP430x241x, MSP430x261x MIXED SIGNAL MICROCONTROLLER

SLAS541C - JUNE 2007 - REVISED JUNE 2008

operating modes

The MSP430 has one active mode and five software selectable low-power modes of operation. An interrupt event can wake up the device from any of the five low-power modes, service the request, and restore back to the low-power mode on return from the interrupt program.

The following six operating modes can be configured by software:

- Active mode (AM)
 - All clocks are active.
- Low-power mode 0 (LPM0)
 - CPU is disabled.
ACLK and SMCLK remain active. MCLK is disabled.
- Low-power mode 1 (LPM1)
 - CPU is disabled.
ACLK and SMCLK remain active. MCLK is disabled.
DCO's dc-generator is disabled if DCO not used in active mode.
- Low-power mode 2 (LPM2)
 - CPU is disabled.
MCLK and SMCLK are disabled.
DCO's dc-generator remains enabled.
ACLK remains active.
- Low-power mode 3 (LPM3)
 - CPU is disabled.
MCLK and SMCLK are disabled.
DCO's dc-generator is disabled.
ACLK remains active.
- Low-power mode 4 (LPM4)
 - CPU is disabled.
ACLK is disabled.
MCLK and SMCLK are disabled.
DCO's dc-generator is disabled.
Crystal oscillator is stopped.

POST OFFICE BOX 655303 • DALLAS, TEXAS 75265

interrupt vector addresses

The interrupt vectors and the power-up starting address are located in the address range 0xFFFF to 0xFFC0. The vector contains the 16-bit address of the appropriate interrupt-handler instruction sequence. If the reset vector (0xFFFFE) contains 0xFFFF (e.g., flash is not programmed), the CPU enters LPM4 after power-up.

INTERRUPT SOURCE	INTERRUPT FLAG	SYSTEM INTERRUPT	WORD ADDRESS	PRIORITY
Power-up External Reset Watchdog Flash Key Violation PC out of range (see Note 1)	PORIFG WDTIFG RSTIFG KEYV (see Note 2)	Reset	0xFFFFE	31, highest

Reserved (see Notes 7 and 8)	Reserved		0x0FFDA to 0x0FFC0	13 to 0, lowest

- NOTES:
1. A reset is executed if the CPU tries to fetch instructions from within the module register memory address range (0x00000 to 0x001FF) or from within unused address ranges.
 2. Multiple source flags.
 3. Interrupt flags are located in the module.
 4. In SPI mode: UCB0RXIFG. In I2C mode: UCALIFG, UCNACKIFG, ICSTTIIFG, UCSTPIFG.
 5. In UART/SPI mode: UCB0TXIFG. In I2C mode: UCB0RXIFG, UCB0TXIFG.
 6. (Non)maskable: The individual interrupt-enable bit can disable an interrupt event, but the general-interrupt enable cannot.
 7. The address 0xFFBE is used as bootstrap loader security key (BSLSKEY).
A 0xAA55 at this location disables the BSL completely.
A zero disables the erasure of the flash if an invalid password is supplied.
 8. The interrupt vectors at addresses 0xFFDA to 0xFFC0 are not used in this device and can be used for regular program code if necessary.

MSP430x241x, MSP430x261x MIXED SIGNAL MICROCONTROLLER

SLAS541C - JUNE 2007 - REVISED JUNE 2008

special function registers

Most interrupt enable bits are collected in the lowest address space. Special-function register bits not allocated to a functional purpose are not physically present in the device. This arrangement provides simple software access.

interrupt enable 1 and 2

Address	7	6	5	4	3	2	1	0
00h			ACCVIE	NMIIE			OFIE	WDTIE

Interrupt Enable Register 1

- WDTIE Watchdog timer interrupt enable. Inactive if watchdog mode is selected.
Active if watchdog timer is configured as general-purpose timer.
- OFIE Oscillator-fault-interrupt enable
- NMIIE Nonmaskable-interrupt enable
- ACCVIE Flash memory access violation interrupt enable

Address	7	6	5	4	3	2	1	0

bootstrap loader (BSL)

The MSP430 BSL enables users to program the flash memory or RAM using a UART serial interface. Access to the MSP430 memory via the BSL is protected by a user-defined password. For complete description of the features of the BSL and its implementation, see the application report *Features of the MSP430 Bootstrap Loader*, literature number SLAA089.

BSL Function	PM, PN Package Pins	ZQW Package Pins
Data Transmit	13 - P1.1	H1 - P1.1
Data Receive	22 - P2.2	M3 - P2.2

flash memory

The flash memory can be programmed via the JTAG port, the bootstrap loader, or in-system by the CPU. The CPU can perform single-byte and single-word writes to the flash memory. Features of the flash memory include:

- Flash memory has n segments of main memory and four segments of information memory (A to D) of 64 bytes each. Each segment in main memory is 512 bytes in size.
- Segments 0 to n may be erased in one step, or each segment may be individually erased.
- Segments A to D can be erased individually, or as a group with segments 0 to n. Segments A to D are also called *information memory*.
- Segment A contains calibration data. After reset, segment A is protected against programming or erasing. It can be unlocked, but care should be taken not to erase this segment if the calibration data is required.
- Flash content integrity check with marginal read modes

peripherals

Peripherals are connected to the CPU through data, address, and control buses and can be handled using all instructions. For complete module descriptions, see the *MSP430x2xx Family User's Guide*, literature number SLAU144.

DMA controller

The DMA controller allows movement of data from one memory address to another without CPU intervention. For example, the DMA controller can be used to move data from the ADC12 conversion memory to RAM. Using the DMA controller can increase the throughput of peripheral modules. The DMA controller reduces system power consumption by allowing the CPU to remain in sleep mode without having to awaken to move data to or from a peripheral.

oscillator and system clock

The clock system in the MSP430x241x and MSP430x261x family of devices is supported by the basic clock module that includes support for a 32768-Hz watch crystal oscillator, an internal very low-power low-frequency oscillator, an internal digitally controlled oscillator (DCO), and a high-frequency crystal oscillator. The basic clock module is designed to meet the requirements of both low system cost and low power consumption. The internal DCO provides a fast turn-on clock source and stabilizes in less than 1 μ s. The basic clock module provides the following clock signals:

- Auxiliary clock (ACLK), sourced from a 32768-Hz watch crystal, a high-frequency crystal, or a very low-power LF oscillator
- Main clock (MCLK), the system clock used by the CPU
- Sub-Main clock (SMCLK), the subsystem clock used by the peripheral modules

The DCO settings to calibrate the DCO output frequency are stored in the information memory segment A.

MSP430x241x, MSP430x261x MIXED SIGNAL MICROCONTROLLER

SLAS541C - JUNE 2007 - REVISED JUNE 2008

calibration data stored in information memory segment A

Calibration data is stored for the DCO and for the ADC12. It is organized in a tag-length-value (TLV) structure.

TAGS USED BY THE ADC CALIBRATION TAGS			
NAME	ADDRESS	VALUE	DESCRIPTION
TAG_DCO_30	0x10F6	0x01	DCO frequency calibration at VCC = 3 V and TA = 25°C at calibration
TAG_ADC12_1	0x10DA	0x10	ADC12_1 calibration tag
TAG_EMPTY	-	0xFE	Identifier for empty memory areas

CAL_BC1_16MHz	-	byte	0x0001
CAL_DCO_16MHz	-	byte	0x0000

brownout, supply voltage supervisor (SVS)

The brownout circuit is implemented to provide the proper internal reset signal to the device during power on and power off. The SVS circuitry detects if the supply voltage drops below a user selectable level and supports both supply voltage supervision (the device is automatically reset) and supply voltage monitoring (SVM, the device is not automatically reset).

The CPU begins code execution after the brownout circuit releases the device reset. However, V_{CC} may not have ramped to V_{CC(min)} at that time. The user must ensure that the default DCO settings are not changed until V_{CC} reaches V_{CC(min)}. If desired, the SVS circuit can be used to determine when V_{CC} reaches V_{CC(min)}.

digital I/O

There are up to eight 8-bit I/O ports implemented—ports P1 through P8:

- All individual I/O bits are independently programmable.
- Any combination of input, output, and interrupt conditions is possible.
- Edge-selectable interrupt input capability for all eight bits of ports P1 and P2.
- Read/write access to port-control registers is supported by all instructions.
- Each I/O has an individually programmable pullup/pulldown resistor.
- Ports P7/P8 can be accessed word wise.

watchdog timer+ (WDT+)

The primary function of the WDT+ module is to perform a controlled system restart after a software problem occurs. If the selected time interval expires, a system reset is generated. If the watchdog function is not needed in an application, the module can be configured as an interval timer and can generate interrupts at selected time intervals.

hardware multiplier

The multiplication operation is supported by a dedicated peripheral module. The module performs 16×16 , 16×8 , 8×16 , and 8×8 bit operations. The module is capable of supporting signed and unsigned multiplication as well as signed and unsigned multiply and accumulate operations. The result of an operation can be accessed immediately after the operands have been loaded into the peripheral registers. No additional clock cycles are required.

universal serial communication interface (USCI)

The USCI modules are used for serial data communication. The USCI module supports synchronous communication protocols such as SPI (3 pin or 4 pin) or I²C, and asynchronous combination protocols such as UART, enhanced UART with automatic baudrate detection (LIN), and IrDA.

The USCI A module provides support for SPI (3 pin or 4 pin), UART, enhanced UART, and IrDA.

The USCI B module provides support for SPI (3 pin or 4 pin) and I²C.

MSP430x241x, MSP430x261x MIXED SIGNAL MICROCONTROLLER

SLAS541C - JUNE 2007 - REVISED JUNE 2008

timer_A3

Timer_A3 is a 16-bit timer/counter with three capture/compare registers. Timer_A3 can support multiple capture/comparisons, PWM outputs, and interval timing. Timer_A3 also has extensive interrupt capabilities. Interrupts may be generated from the counter on overflow conditions and from each of the capture/compare registers.

MSP430x241x, MSP430x261x MIXED SIGNAL MICROCONTROLLER

SLAS541C - JUNE 2007 - REVISED JUNE 2008

comparator_A+

The primary function of the comparator_A+ module is to support precision slope analog-to-digital conversions, battery-voltage supervision, and monitoring of external analog signals.

ADC12

The ADC12 module supports fast, 12-bit analog-to-digital conversions. The module implements a 12-bit SAR core, sample select control, reference generator, and a 16-word conversion-and-control buffer. The conversion-and-control buffer allows up to 16 independent ADC samples to be converted and stored without any CPU intervention.

DAC12

The DAC12 module is a 12-bit, R-ladder, voltage output DAC. The DAC12 may be used in 8-bit or 12-bit mode and may be used in conjunction with the DMA controller. When multiple DAC12 modules are present, they may be grouped together for synchronous operation.

MSP430x241x, MSP430x261x MIXED SIGNAL MICROCONTROLLER

SLAS541C – JUNE 2007 – REVISED JUNE 2008

absolute maximum ratings (see Note 1)

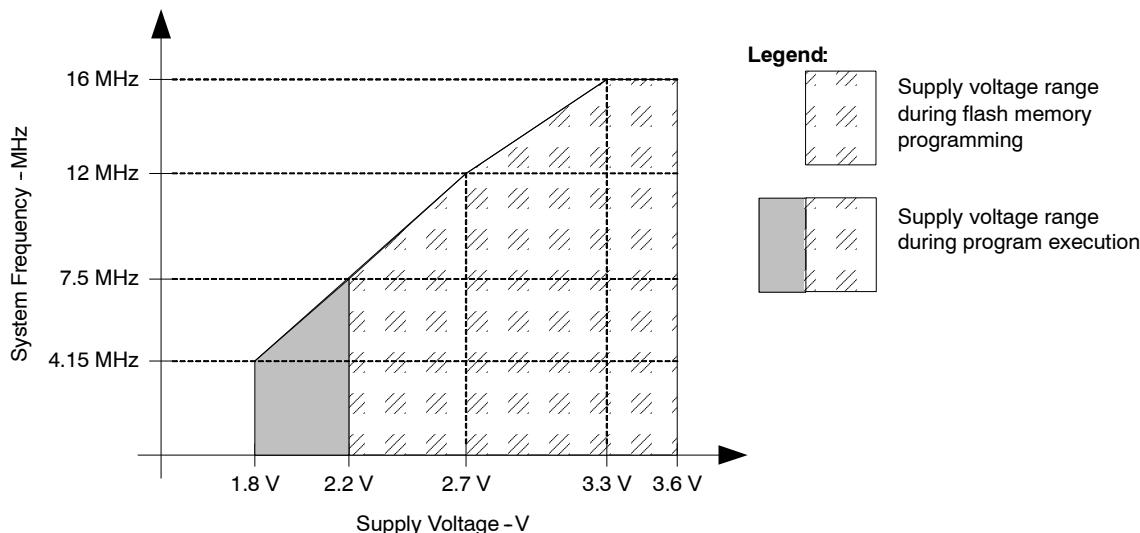

Voltage applied at V_{CC} to V_{SS}	-0.3 V to 4.1 V
Voltage applied to any pin (see Note 2)	-0.3 V to $V_{CC} + 0.3$ V
Diode current at any device terminal	± 2 mA
Storage temperature: Unprogrammed device (see Note 3)	-55°C to 150°C
Programmed device (see Note 3)	-40°C to 105°C

- NOTES: 1. Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
2. All voltages referenced to V_{SS} . The JTAG fuse-blow voltage, V_{FB} , is allowed to exceed the absolute maximum rating. The voltage is applied to the TDI/TCLK pin when blowing the JTAG fuse.
3. Higher temperature may be applied during board soldering process according to the current JEDEC J-STD-020 specification, with peak reflow temperatures not higher than classified on the device label on the shipping boxes or reels.

recommended operating conditions

PARAMETER		MIN	MAX	UNIT
Supply voltage during program execution, V_{CC}	$AV_{CC} = DV_{CC} = V_{CC}$ (see Note 1)	1.8	3.6	V
Supply voltage during flash memory programming, V_{CC}	$AV_{CC} = DV_{CC} = V_{CC}$ (see Note 1)	2.2	3.6	V
Supply voltage, V_{SS}	$AV_{SS} = DV_{SS} = V_{SS}$	0.0	0.0	V
Operating free-air temperature, T_A	I version	-40	85	°C
	T version	-40	105	
Processor frequency f_{SYSTEM} (maximum MCLK frequency) (see Notes 2 and 3 and Figure 1)	$V_{CC} = 1.8$ V, Duty cycle = 50% $\pm 10\%$	dc	4.15	MHz
	$V_{CC} = 2.7$ V, Duty cycle = 50% $\pm 10\%$	dc	12	
	$V_{CC} \geq 3.3$ V, Duty cycle = 50% $\pm 10\%$	dc	16	

- NOTES: 1. It is recommended to power AV_{CC} and DV_{CC} from the same source. A maximum difference of 0.3 V between AV_{CC} and DV_{CC} can be tolerated during power-up.
2. The MSP430 CPU is clocked directly with MCLK.
Both the high and low phase of MCLK must not exceed the pulse width of the specified maximum frequency.
3. Modules might have a different maximum input clock specification. See the specification of the respective module in this data sheet.

NOTE: Minimum processor frequency is defined by system clock. Flash program or erase operations require a minimum V_{CC} of 2.2 V.

C _I Input capacitance	V _{IN} = V _{SS} or V _{CC}			5		pF

NOTE 1: XIN and XT2IN in bypass mode only.

inputs - ports P1 and P2

PARAMETER	TEST CONDITIONS	V _{CC}	MIN	MAX	UNIT
t _{int} External interrupt timing	Port P1, P2: P1.x to P2.x, external trigger pulse width to set the interrupt flag (see Note 1)	2.2 V/3 V	20		ns

NOTE 1: The external signal sets the interrupt flag every time the minimum t_(int) parameters are met. It may be set with trigger signals shorter than t_(int).

leakage current - ports P1 through P8 (see Note 1 and 2)

PARAMETER	TEST CONDITIONS	V _{CC}	MIN	MAX	UNIT
I _{lkq} (Px.x) High-impedance leakage current	see Notes 1 and 2	2.2 V/3 V	±50		nA

NOTES: 1. The leakage current is measured with V_{SS} or V_{CC} applied to the corresponding pin(s), unless otherwise noted.
2. The leakage of digital port pins is measured individually. The port pin is selected for input and the pullup/pulldown resistor is disabled.

MSP430x241x, MSP430x261x MIXED SIGNAL MICROCONTROLLER

SLAS541C – JUNE 2007 – REVISED JUNE 2008

electrical characteristics over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted) (continued)

standard inputs - \bar{RST}/NMI

PARAMETER	TEST CONDITIONS	V _{CC}	MIN	MAX	UNIT
V _{IL} Low-level input voltage		2.2 V/3 V	V _{SS}	V _{SS} +0.6	V
V _{IH} High-level input voltage		2.2 V/3 V	0.8×V _{CC}	V _{CC}	V

outputs - ports P1 through P8

PARAMETER	TEST CONDITIONS	V _{CC}	MIN	MAX	UNIT
V _{OH} High-level output voltage	I _{OH(max)} = -1.5 mA (see Note 2)	2.2 V	V _{CC} -0.25	V _{CC}	V
	I _{OH(max)} = -6 mA (see Note 2)		V _{CC} -0.6	V _{CC}	
	I _{OH(max)} = -1.5 mA (see Note 2)	3 V	V _{CC} -0.25	V _{CC}	
	I _{OH(max)} = -6 mA (see Note 2)		V _{CC} -0.6	V _{CC}	
V _{OL} Low-level output voltage	I _{OL(max)} = 1.5 mA (see Note 2)	2.2 V	V _{SS}	V _{SS} +0.25	V
	I _{OL(max)} = 6 mA (see Note 2)		V _{SS}	V _{SS} +0.6	
	I _{OL(max)} = 1.5 mA (see Note 2)	3 V	V _{SS}	V _{SS} +0.25	
	I _{OL(max)} = 6 mA (see Note 2)		V _{SS}	V _{SS} +0.6	

- NOTES: 1. The maximum total current, I_{OH(max)} and I_{OL(max)}, for all outputs combined, should not exceed ± 12 mA to satisfy the maximum voltage drop specified.
 2. The maximum total current, I_{OH(max)} and I_{OL(max)}, for all outputs combined, should not exceed ± 48 mA to satisfy the maximum voltage drop specified.

output frequency - ports P1 through P8

PARAMETER	TEST CONDITIONS	V _{CC}	MIN	TYP	MAX	UNIT
f _{Px,y} Port output frequency with load	P1.4/SMCLK, C _L = 20 pF, R _L = 1 kΩ (see Notes 1 and 2)	2.2 V	DC	10	MHz	
		3.0 V	DC	12		
f _{Port_CLK} Clock output frequency	P2.0/ACLK/CA2, P1.4/SMCLK, C _L = 20 pF (see Note 2)	2.2 V	DC	12	MHz	
		3.3 V	DC	16		
t _(Xdc) Duty cycle of output frequency	P5.6/ACLK, C _L = 20 pF, LF mode		30	50	70	%
	P5.6/ACLK, C _L = 20 pF, XT1 mode		40	50	60	
	P5.4/MCLK, C _L = 20 pF, XT1 mode		40		60	%
	P5.4/MCLK, C _L = 20 pF, DCO	50% - 15 ns	50	50% + 15 ns		
	P1.4/SMCLK, C _L = 20 pF, XT2 mode		40		60	
	P1.4/SMCLK, C _L = 20 pF, DCO	50% - 15 ns		50% + 15 ns		

- NOTES: 1. A resistive divider with 2 times 0.5 kΩ between V_{CC} and V_{SS} is used as load. The output is connected to the center tap of the divider.
 2. The output voltage reaches at least 10% and 90% V_{CC} at the specified toggle frequency.

t _{reset} Pulse length at RST/NMI pin to accept a reset		2.2 V / 3 V	2			μ s

NOTES: 1. The current consumption of the brownout module is included in the I_{CC} current consumption data. The voltage level

$$V_{(B_IT-)} + V_{hys(B_IT-)} \leq 1.8 \text{ V}$$

2. During power up, the CPU begins code execution following a period of t_{d(BOR)} after V_{CC} = V_(B_IT-) + V_{hys(B_IT-)}. The default DCO settings must not be changed until V_{CC} \geq V_{CC(MIN)}, where V_{CC(min)} is the minimum supply voltage for the desired operating frequency.

electrical characteristics over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted) (continued)

main DCO characteristics

- All ranges selected by RSELx overlap with RSELx + 1: RSELx = 0 overlaps RSELx = 1, ... RSELx = 14 overlaps RSELx = 15.
- DCO control bits DCOx have a step size as defined by parameter S_{DCO} .
- Modulation control bits MODx select how often $f_{DCO(RSEL,DCO+1)}$ is used within the period of 32 DCOCLK cycles. The frequency $f_{DCO(RSEL,DCO)}$ is used for the remaining cycles. The frequency is an average equal to:

$$f_{average} = \frac{32 \times f_{DCO(RSEL,DCO)} \times f_{DCO(RSEL,DCO+1)}}{MOD \times f_{DCO(RSEL,DCO)} + (32 - MOD) \times f_{DCO(RSEL,DCO+1)}}$$

PARAMETER	TEST CONDITIONS	V _{cc}	MIN	TYP	MAX	UNIT
f _{LFXT1,LF} LFXT1 oscillator crystal frequency, LF mode 0/1	XTS = 0, LFXT1Sx = 0 or 1	1.8 V to 3.6 V		32,768		Hz
f _{LFXT1,LF,logic} LFXT1 oscillator logic level square wave input frequency, LF mode	XTS = 0, LFXT1Sx = 3, XCAPx = 0	1.8 V to 3.6 V	10,000	32,768	50,000	Hz
OA _{LF} Oscillation allowance for LF crystals	XTS = 0, LFXT1Sx = 0, f _{LFXT1,LF} = 32,768 kHz, C _{L,eff} = 6 pF		500			kΩ
	XTS = 0, LFXT1Sx = 0; f _{LFXT1,LF} = 32,768 kHz, C _{L,eff} = 12 pF				200	
C _{L,eff} Integrated effective load capacitance, LF mode (see Note 1)	XTS = 0, XCAPx = 0		1			pF
	XTS = 0, XCAPx = 1				5.5	
	XTS = 0, XCAPx = 2				8.5	
	XTS = 0, XCAPx = 3				11	
Duty cycle	LF mode	XTS = 0, Measured at P1.4/ACLK, f _{LFXT1,LF} = 32,768 Hz	2.2 V/3 V	30	50	70
f _{Fault,LF}	Oscillator fault frequency, LF mode (see Note 3)	XTS = 0, LFXT1Sx = 3, XCAPx = 0 (see Note 2)	2.2 V/3 V	10	10,000	Hz

NOTES: 1. Includes parasitic bond and package capacitance (approximately 2 pF per pin).

Since the PCB adds additional capacitance, it is recommended to verify the correct load by measuring the ACLK frequency. For a correct setup, the effective load capacitance should always match the specification of the used crystal.

2. Measured with logic level input frequency but also applies to operation with crystals.
3. Frequencies below the MIN specification set the fault flag, frequencies above the MAX specification do not set the fault flag, and frequencies in between might set the flag.
4. To improve EMI on the LFXT1 oscillator the following guidelines should be observed.
 - Keep as short of a trace as possible between the device and the crystal.
 - Design a good ground plane around the oscillator pins.
 - Prevent crosstalk from other clock or data lines into oscillator pins XIN and XOUT.
 - Avoid running PCB traces under or adjacent to the XIN and XOUT pins.
 - Use assembly materials and praxis to avoid any parasitic load on the oscillator XIN and XOUT pins.
 - If conformal coating is used, ensure that it does not induce capacitive/resistive leakage between the oscillator pins.
 - Do not route the XOUT line to the JTAG header to support the serial programming adapter as shown in other documentation. This signal is no longer required for the serial programming adapter.
5. Applies only if using an external logic-level clock source. Not applicable when using a crystal or resonator.

Duty cycle	HF mode	XTS = 1, XCAPx = 0, Measured at P1.4/ACLK, f _{LFXT1,HF} = 10 MHz	2.2 V/3 V	40	50	60	%
		XTS = 1, XCAPx = 0, Measured at P1.4/ACLK, f _{LFXT1,HF} = 16 MHz	2.2 V/3 V	40	50	60	
f _{Fault,HF}	Oscillator fault frequency, HF mode (see Note 4)	XTS = 1, LFXT1Sx = 3, XCAPx = 0 (see Note 3)	2.2 V/3 V	30		300	kHz

NOTES: 1. Includes parasitic bond and package capacitance (approximately 2 pF per pin).

Since the PCB adds additional capacitance it is recommended to verify the correct load by measuring the ACLK frequency. For a correct setup the effective load capacitance should always match the specification of the used crystal.

2. Requires external capacitors at both terminals. Values are specified by crystal manufacturers.
3. Measured with logic level input frequency but also applies to operation with crystals.
4. Frequencies below the MIN specification set the fault flag, frequencies above the MAX specification do not set the fault flag, and frequencies in between might set the flag.
5. To improve EMI on the LFXT1 oscillator the following guidelines should be observed.
 - Keep the trace between the device and the crystal as short as possible.
 - Design a good ground plane around the oscillator pins.
 - Prevent crosstalk from other clock or data lines into oscillator pins XIN and XOUT.
 - Avoid running PCB traces under or adjacent to the XIN and XOUT pins.
 - Use assembly materials and praxis to avoid any parasitic load on the oscillator XIN and XOUT pins.
 - If conformal coating is used, ensure that it does not induce capacitive/resistive leakage between the oscillator pins.
 - Do not route the XOUT line to the JTAG header to support the serial programming adapter as shown in other documentation. This signal is no longer required for the serial programming adapter.

t _(response)	Response time, low-to-high and high-to-low (see Note 3)	T _A = 25°C, Overdrive 10 mV, Without filter: CAF = 0	2.2 V	80	165	300	ns
			3 V	70	120	240	
	T _A = 25°C, Overdrive 10 mV, With filter: CAF = 1	2.2 V	1.4	1.9	2.8	µs	
			3 V	0.9	1.5	2.2	

- NOTES:
1. The leakage current for the Comparator_A+ terminals is identical to I_{lkg(Px,x)} specification.
 2. The input offset voltage can be cancelled by using the CAEX bit to invert the Comparator_A+ inputs on successive measurements. The two successive measurements are then summed together.
 3. The response time is measured at P2.2/CAOUT/TA0/CA4 with an input voltage step, with Comparator_A+ already enabled (CAON = 1). If CAON is set at the same time, a settling time of up to 300 ns is added to the response time.

12-bit ADC power supply and input range conditions (see Note 1)

PARAMETER	TEST CONDITIONS	V _{CC}	MIN	TYP	MAX	UNIT
A _{V_{CC}}	Analog supply voltage A _{V_{CC}} and D _{V_{CC}} are connected together, A _{V_{SS}} and D _{V_{SS}} are connected together, V _(AVSS) = V _(DVSS) = 0 V		2.2		3.6	V
V _(P6.x/Ax)	Analog input voltage (see Note 2) All P6.0/A0 to P6.7/A7 terminals. Analog inputs selected in ADC12MCTLx register and P6Sel.x = 1, 0 ≤ x ≤ 7, V _(AVSS) ≤ V _{P6.x/Ax} ≤ V _(AVCC)		0		V _{AVCC}	V
I _{ADC12}	Operating supply current into A _{V_{CC}} terminal (see Note 3)	f _{ADC12CLK} = 5 MHz, ADC12ON = 1, REFON = 0, SHT0 = 0, SHT1 = 0, ADC12DIV = 0	2.2 V	0.65	0.8	mA
			3 V	0.8	1.0	
I _{REF+}	Operating supply current into A _{V_{CC}} terminal (see Note 4)	f _{ADC12CLK} = 5 MHz, ADC12ON = 0, REFON = 1, REF2_5V = 1	3 V	0.5	0.7	mA
		f _{ADC12CLK} = 5 MHz, ADC12ON = 0, REFON = 1, REF2_5V = 0	2.2 V	0.5	0.7	
			3 V	0.5	0.7	
C _I †	Input capacitance Only one terminal can be selected at one time, P6.x/Ax	2.2 V			40	pF
R _I †	Input MUX ON resistance 0 V ≤ V _{Ax} ≤ V _{AVCC}	3 V			2000	Ω

† Limits verified by design

- NOTES: 1. The leakage current is defined in the leakage current table with P6.x/Ax parameter.
 2. The analog input voltage range must be within the selected reference voltage range V_{R+} to V_{R-} for valid conversion results.
 3. The internal reference supply current is not included in current consumption parameter I_{ADC12}.
 4. The internal reference current is supplied via terminal A_{V_{CC}}. Consumption is independent of the ADC12ON control bit, unless a conversion is active. The REFON bit enables to settle the built-in reference before starting an A/D conversion.

12-bit ADC external reference (see Note 1)

PARAMETER	TEST CONDITIONS	V _{CC}	MIN	MAX	UNIT
V _{eREF+}	Positive external reference voltage input V _{eREF+} > V _{REF-/VeREF-} (see Note 2)		1.4	V _{AVCC}	V
V _{REF-/VeREF-}	Negative external reference voltage input V _{eREF+} > V _{REF-/VeREF-} (see Note 3)		0	1.2	V
(V _{eREF+} - V _{REF-/VeREF-})	Differential external reference voltage input V _{eREF+} > V _{REF-/VeREF-} (see Note 4)		1.4	V _{AVCC}	V
I _{VeREF+}	Static input current 0 V ≤ V _{eREF+} ≤ V _{AVCC}	2.2 V/3 V		±1	µA
I _{VREF-/VeREF-}	Static input current 0 V ≤ V _{eREF-} ≤ V _{AVCC}	2.2 V/3 V		±1	µA

- NOTES: 1. The external reference is used during conversion to charge and discharge the capacitance array. The input capacitance, C_i, is also the dynamic load for an external reference during conversion. The dynamic impedance of the reference supply should follow the recommendations on analog-source impedance to allow the charge to settle for 12-bit accuracy.
 2. The accuracy limits the minimum positive external reference voltage. Lower reference voltage levels may be applied with reduced accuracy requirements.
 3. The accuracy limits the maximum negative external reference voltage. Higher reference voltage levels may be applied with reduced accuracy requirements.
 4. The accuracy limits minimum external differential reference voltage. Lower differential reference voltage levels may be applied with reduced accuracy requirements.

† Limits characterized

‡ Limits verified by design

- NOTES:
- The internal buffer operational amplifier and the accuracy specifications require an external capacitor. All INL and DNL tests use two capacitors between pins V_{REF+} and AV_{SS} and V_{REF-/V_eREF-} and AV_{SS}: 10 μF tantalum and 100 nF ceramic.
 - The condition is that the error in a conversion started after t_{REFON} is less than ±0.5 LSB. The settling time depends on the external capacitive load.

electrical characteristics over recommended operating free-air temperature (unless otherwise noted) (continued)

12-bit ADC temperature sensor and built-in V_{MID}

PARAMETER	TEST CONDITIONS	V _{CC}	MIN	TYP	MAX	UNIT
I _{SENSOR}	Operating supply current into AV _{CC} terminal (see Note 1)	REFON = 0, INCH = 0Ah, ADC12ON = 1, T _A = 25°C	2.2 V	40	120	μA
		3 V	60	160		
V _{SENSOR} [†]	See Note 2	ADC12ON = 1, INCH = 0Ah, T _A = 0°C	2.2 V	986		mV
		3 V	986			
TC _{SENSOR} [†]		ADC12ON = 1, INCH = 0Ah	2.2 V	3.55		mV/°C
		3 V	3.55			
t _{SENSOR(sample)} [†]	Sample time required if channel 10 is selected (see Note 3)	ADC12ON = 1, INCH = 0Ah, Error of conversion result ≤ 1 LSB	2.2 V	30		μs
		3 V	30			
I _{V_{MID}}	Current into divider at channel 11 (see Note 4)	ADC12ON = 1, INCH = 0Bh	2.2 V		NA	μA
		3 V			NA	
V _{MID}	AV _{CC} divider at channel 11	ADC12ON = 1, INCH = 0Bh, V _{MID} is ~0.5 × V _{AVCC}	2.2 V	1.1	1.1±0.04	V
		3 V	1.5	1.50±0.04		
t _{V_{MID}(sample)}	Sample time required if channel 11 is selected (see Note 5)	ADC12ON = 1, INCH = 0Bh, Error of conversion result ≤ 1 LSB	2.2 V	1400		ns
		3 V	1220			

[†] Limits characterized

- NOTES:
- The sensor current I_{SENSOR} is consumed if (ADC12ON = 1 and REFON = 1) or if (ADC12ON = 1, INCH = 0Ah and sample signal is high). When REFON = 1, I_{SENSOR} is already included in I_{REF+}.
 - The temperature sensor offset can be as much as ±20°C. A single-point calibration is recommended to minimize the offset error of the built-in temperature sensor.
 - The typical equivalent impedance of the sensor is 51 kΩ. The sample time required includes the sensor-on time t_{SENSOR(on)}.
 - No additional current is needed. The V_{MID} is used during sampling.
 - The on time t_{V_{MID}(on)} is included in the sampling time t_{V_{MID}(sample)}; no additional on time is needed.

electrical characteristics over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted) (continued)

12-bit DAC supply specifications

PARAMETER	TEST CONDITIONS	V _{CC}	T _A	MIN	TYP	MAX	UNIT
A _{V_{CC}} Analog supply voltage	A _{V_{CC}} = D _{V_{CC}} , A _{V_{SS}} = D _{V_{SS}} = 0 V			2.20	3.60		V
I _{DD} Supply current, single DAC channel (see Notes 1 and 2)	DAC12AMPx = 2, DAC12IR = 0, DAC12_xDAT = 0x0800	2.2 V/3 V	-40°C to 85°C	50	110		μA
	DAC12AMPx = 2, DAC12IR = 1, DAC12_xDAT = x00800, V _{eREF+} = V _{REF+} = A _{V_{CC}}		105°C	69	150		
	DAC12AMPx = 5, DAC12IR = 1, DAC12_xDAT = 0x0800, V _{eREF+} = V _{REF+} = A _{V_{CC}}	2.2 V/3 V		50	130		
	DAC12AMPx = 7, DAC12IR = 1, DAC12_xDAT = 0x0800, V _{eREF+} = V _{REF+} = A _{V_{CC}}	2.2 V/3 V		200	440		
PSRR Power-supply rejection ratio (see Notes 3 and 4)	DAC12_xDAT = 800h, V _{REF} = 1.5 V, ΔA _{V_{CC}} = 100mV	2.2 V		70			dB
	DAC12_xDAT = 800h, V _{REF} = 1.5 V or 2.5 V, ΔA _{V_{CC}} = 100mV	3 V					

- NOTES: 1. No load at the output pin, DAC12_0 or DAC12_1, assuming that the control bits for the shared pins are set properly.
 2. Current into reference terminals not included. If DAC12IR = 1 current flows through the input divider; see Reference Input specifications.
 3. PSRR = $20 \times \log\{\Delta A_{V_{CC}}/\Delta V_{DAC12_xOUT}\}$
 4. V_{REF} is applied externally. The internal reference is not used.

electrical characteristics over recommended operating free-air temperature (unless otherwise noted) (continued)

12-bit DAC linearity specifications (see Figure 41)

PARAMETER		TEST CONDITIONS	V _{CC}	MIN	TYP	MAX	UNIT
Resolution		12-bit monotonic		12			bits
INL	Integral nonlinearity (see Note 1)	V _{REF} = 1.5 V DAC12AMPx = 7, DAC12IR = 1	2.2 V				LSB
		V _{REF} = 2.5 V DAC12AMPx = 7, DAC12IR = 1	3 V		±2.0	±8.0	
DNL	Differential nonlinearity (see Note 1)	V _{REF} = 1.5 V DAC12AMPx = 7, DAC12IR = 1	2.2 V				LSB
		V _{REF} = 2.5 V DAC12AMPx = 7, DAC12IR = 1	3 V		±0.4	±1.0	
E _O	Offset voltage without calibration (see Notes 1 and 2)	V _{REF} = 1.5 V DAC12AMPx = 7, DAC12IR = 1	2.2 V				mV
		V _{REF} = 2.5 V DAC12AMPx = 7, DAC12IR = 1	3 V				
	Offset voltage with calibration (see Notes 1 and 2)	V _{REF} = 1.5 V DAC12AMPx = 7, DAC12IR = 1	2.2 V				
		V _{REF} = 2.5 V DAC12AMPx = 7, DAC12IR = 1	3 V				
d _{E(O)} /d _T	Offset error temperature coefficient (see Note 1)		2.2 V/3 V		30		µV/C
E _G	Gain error (see Note 1)	V _{REF} = 1.5 V	2.2 V				% FSR
		V _{REF} = 2.5 V	3 V		±3.50		
d _{E(G)} /d _T	Gain temperature coefficient (see Note 1)		2.2 V/3 V		10		ppm of FSR/°C
t _{Offset_Cal}	Time for offset calibration (see Note 3)	DAC12AMPx = 2			100		ms
		DAC12AMPx = 3, 5	2.2 V/3 V		32		
		DAC12AMPx = 4, 6, 7			6		

- NOTES:
1. Parameters calculated from the best-fit curve from 0x0A to 0xFFFF. The best-fit curve method is used to deliver coefficients "a" and "b" of the first-order equation: $y = a + b \times x$. $V_{DAC12_xOUT} = E_O + (1 + E_G) \times (V_{eREF+}/4095) \times DAC12_xDAT$, DAC12IR = 1.
 2. The offset calibration works on the output operational amplifier. Offset calibration is triggered setting bit DAC12CALON.
 3. The offset calibration can be done if DAC12AMPx = {2, 3, 4, 5, 6, 7}. The output operational amplifier is switched off with DAC12AMPx = {0, 1}. The DAC12 module should be configured prior to initiating calibration. Port activity during calibration may affect accuracy and is not recommended.

NOTE 1: Data is valid after the offset calibration of the output amplifier.

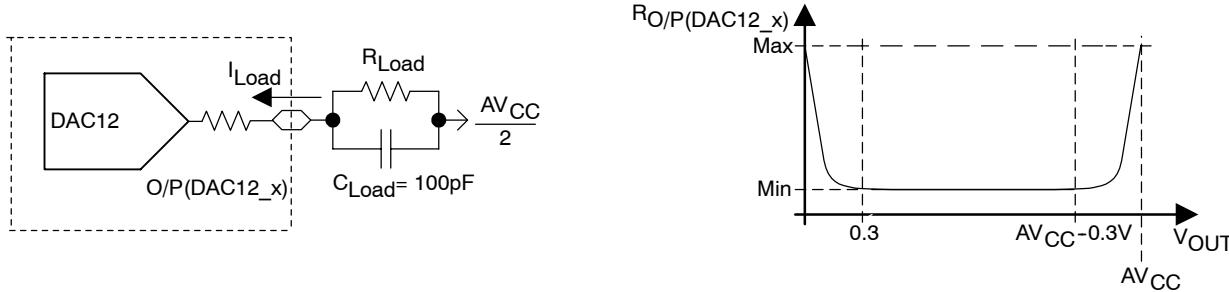

Figure 44. DAC12_x Output Resistance Tests

electrical characteristics over recommended operating free-air temperature (unless otherwise noted) (continued)

12-bit DAC reference input specifications

PARAMETER		TEST CONDITIONS	V _{CC}	MIN	TYP	MAX	UNIT
V _{eREF+}	Reference input voltage range	DAC12IR = 0, (see Notes 1 and 2)	2.2 V/3 V		A _{VCC} /3	A _{VCC} +0.2	V
		DAC12IR = 1, (see Notes 3 and 4)			A _{VCC}	A _{VCC} +0.2	
R _{i(VREF+)} , R _{i(VeREF+)}	Reference input resistance	DAC12_0 IR = DAC12_1 IR = 0	2.2 V/3 V	20			MΩ
		DAC12_0 IR = 1, DAC12_1 IR = 0		40	48	56	kΩ
		DAC12_0 IR = 0, DAC12_1 IR = 1		20	24	28	
		DAC12_0 IR = DAC12_1 IR = 1	2.2 V/3 V				
		DAC12_0 SREFx = DAC12_1 SREFx (see Note 5)					

- NOTES:
1. For a full-scale output, the reference input voltage can be as high as 1/3 of the maximum output voltage swing (A_{VCC}).
 2. The maximum voltage applied at reference input voltage terminal V_{eREF+} = [A_{VCC} - V_{E(O)}] / [3*(1 + E_G)].
 3. For a full-scale output, the reference input voltage can be as high as the maximum output voltage swing (A_{VCC}).
 4. The maximum voltage applied at reference input voltage terminal V_{eREF+} = [A_{VCC} - V_{E(O)}] / (1 + E_G).
 5. When DAC12IR = 1 and DAC12SREFx = 0 or 1 for both channels, the reference input resistive dividers for each DAC are in parallel reducing the reference input resistance.

12-bit DAC dynamic specifications, V_{ref} = V_{CC}, DAC12IR = 1 (see Figure 45 and Figure 46)

PARAMETER		TEST CONDITIONS	V _{CC}	MIN	TYP	MAX	UNIT
t _{ON}	DAC12 on-time	DAC12_xDAT = 800h, Error _{V(O)} < ±0.5 LSB (see Note 1 and Figure 45)	2.2 V/3 V		60	120	μs

electrical characteristics over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted) (continued)

flash memory

PARAMETER	TEST CONDITIONS	V _{CC}	MIN	TYP	MAX	UNIT
V _{CC(PGM/ERASE)} Program and erase supply voltage			2.2	3.6		V
f _{FTG} Flash Timing Generator frequency			257	476		kHz
I _{PGM} Supply current from DV _{CC} during program		2.2 V/ 3.6 V		3	5	mA
I _{ERASE} Supply current from DV _{CC} during erase		2.2 V/ 3.6 V		3	7	mA
t _{CPT} Cumulative program time	See Note 1	2.2 V/ 3.6 V		4		ms
t _{CMErase} Cumulative mass erase time	See Note 2	2.2 V/ 3.6 V	200			ms
Program/Erase endurance			10 ⁴	10 ⁵		cycles
t _{Retention} Data retention duration	T _J = 25°C		100			years
t _{Word} Word or byte program time	See Note 3			35		t _{FTG}
t _{Block, 0} Block program time for first byte or word	See Note 3			30		t _{FTG}
t _{Block, 1-63} Block program time for each additional byte or word	See Note 3			21		t _{FTG}
t _{Block, End} Block program end-sequence wait time	See Note 3			6		t _{FTG}
t _{Mass Erase} Mass erase time (see Note 4)	See Note 3			10593		t _{FTG}
t _{Seg Erase} Segment erase time	See Note 3			4819		t _{FTG}

- NOTES:
1. The cumulative program time must not be exceeded when writing to a 64-byte flash block. This parameter applies to all programming methods: individual word/byte write and block write modes.
 2. The mass erase duration generated by the flash timing generator is at least 11.1 ms (= 5297×1/f_{FTG},max = 5297 × 1/476 kHz). To achieve the required cumulative mass erase time, the Flash Controller's mass erase operation can be repeated until this time is met. A worst-case minimum of 19 cycles is required.
 3. These values are hardwired into the Flash Controller's state machine (t_{FTG} = 1/f_{FTG}).
 4. To erase the complete code area, the mass erase must be performed once with a dummy address in the range of the lower 64-kB flash addresses and once with the dummy address in the upper 64-kB flash addresses.

RAM

PARAMETER	TEST CONDITIONS	MIN	MAX	UNIT
V _{RAMh} See Note 1	CPU halted	1.6		V

NOTE 1: This parameter defines the minimum supply voltage when the data in program memory RAM remain unchanged. No program execution should take place during this supply voltage condition.

MSP430x241x, MSP430x261x MIXED SIGNAL MICROCONTROLLER

SLAS541C – JUNE 2007 - REVISED JUNE 2008

electrical characteristics over recommended operating free-air temperature (unless otherwise noted) (continued)

JTAG interface

PARAMETER		TEST CONDITIONS	V _{CC}	MIN	TYP	MAX	UNIT
f _{TCK}	TCK input frequency	See Note 1	2.2 V	0	5		MHz
			3 V	0	10		
R _{Internal}	Internal pullup resistance on TMS, TCK, TDI/TCLK	See Note 2	2.2 V / 3 V	25	60	90	kΩ

NOTES: 1. f_{TCK} may be restricted to meet the timing requirements of the module selected.

2. TMS, TDI/TCLK, and TCK pullup resistors are implemented in all versions.

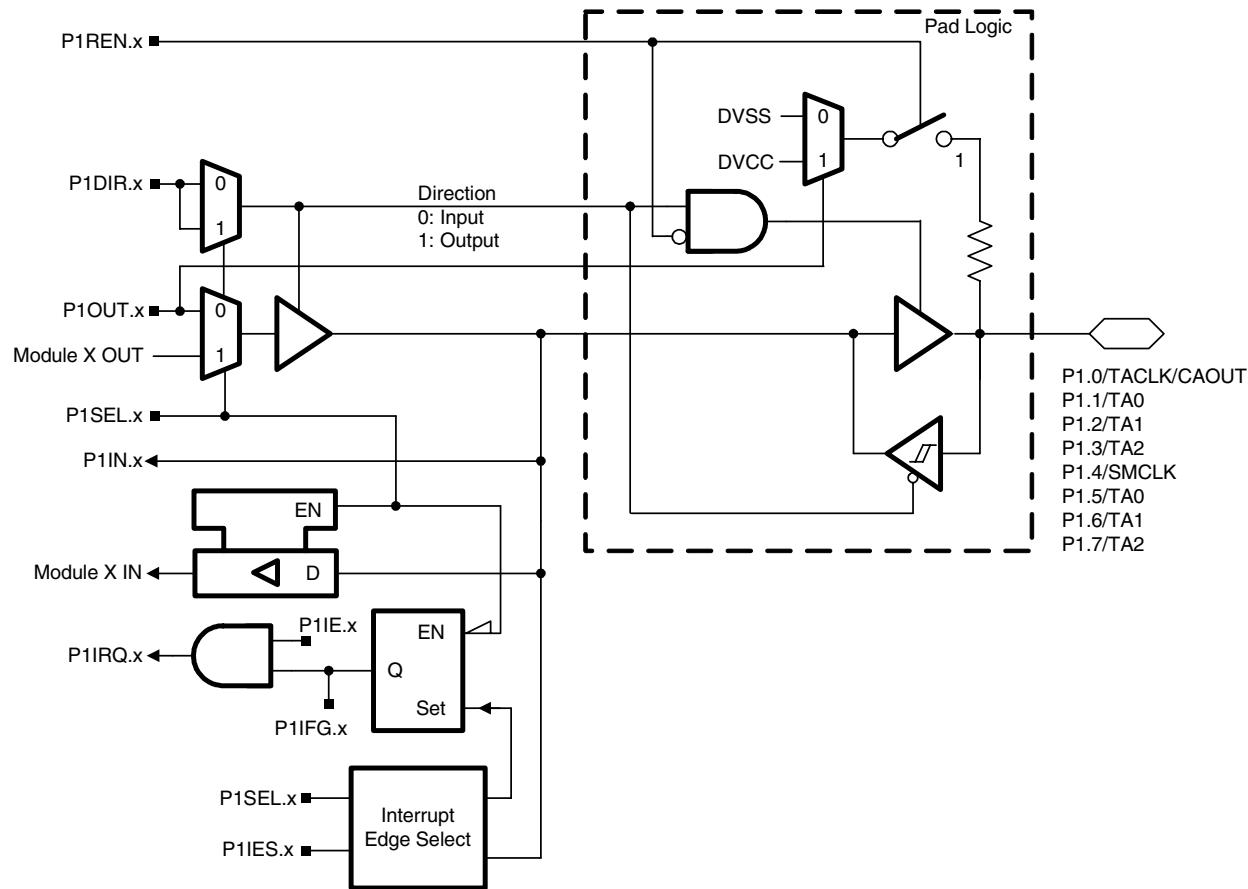

JTAG fuse (see Note 1)

PARAMETER		TEST CONDITIONS	MIN	MAX	UNIT
V _{CC(FB)}	Supply voltage during fuse-blow condition	T _A = 25°C	2.5		V
V _{FB}	Voltage level on TDI/TCLK for fuse blow (F versions)		6	7	V
I _{FB}	Supply current into TDI/TCLK during fuse blow			100	mA
t _{FB}	Time to blow fuse			1	ms

NOTE 1: Once the fuse is blown, no further access to the MSP430 JTAG/Test and emulation features is possible. The JTAG block is switched to bypass mode.

SLAS541C - JUNE 2007 - REVISED JUNE 2008

APPLICATION INFORMATION

JTAG pins: TMS, TCK, TDI/TCLK, TDO/TDI, input/output with Schmitt trigger

APPLICATION INFORMATION

JTAG fuse check mode

MSP430 devices that have the fuse on the TDI/TCLK terminal have a fuse check mode that tests the continuity of the fuse the first time the JTAG port is accessed after a power-on reset (POR). When activated, a fuse check current, I_{TF} , of 1 mA at 3 V or 2.5 mA at 5 V can flow from the TDI/TCLK pin to ground if the fuse is not burned. Care must be taken to avoid accidentally activating the fuse check mode and increasing overall system power consumption.

Activation of the fuse check mode occurs with the first negative edge on the TMS pin after power up or if the TMS is being held low during power up. The second positive edge on the TMS pin deactivates the fuse check mode. After deactivation, the fuse check mode remains inactive until another POR occurs. After each POR the fuse check mode has the potential to be activated.

The fuse check current flows only when the fuse check mode is active and the TMS pin is in a low state (see Figure 49). Therefore, the additional current flow can be prevented by holding the TMS pin high (default condition).

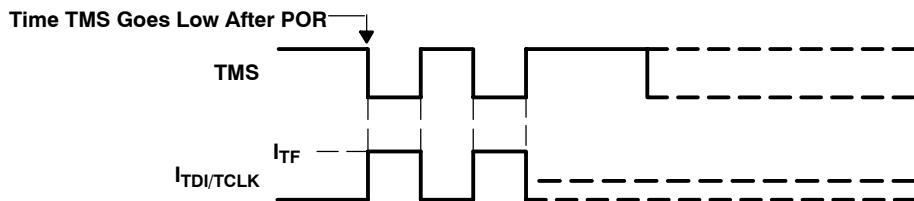

Figure 49. Fuse Check Mode Current

MSP430x241x, MSP430x261x MIXED SIGNAL MICROCONTROLLER

SLAS541C – JUNE 2007 - REVISED JUNE 2008

Data Sheet Revision History

LITERATURE NUMBER	SUMMARY
SLAS541	Product Preview release.
SLAS541A	Production Data release. Corrected the format and the content shown on the first page. Corrected pin number of P3.6 and P3.7 in 64-pin package in the terminal function list. Corrected the port schematics. Corrected "calibration data" section (page 20). Typos and formatting corrected. Added in the figure "typical characteristics - LPM4 current" (Page 33).
SLAS541B	Added preview of MSP430F261x BGA devices
SLAS541C	Release to market of MSP430F261x BGA devices

POST OFFICE BOX 655303 • DALLAS, TEXAS 75265

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

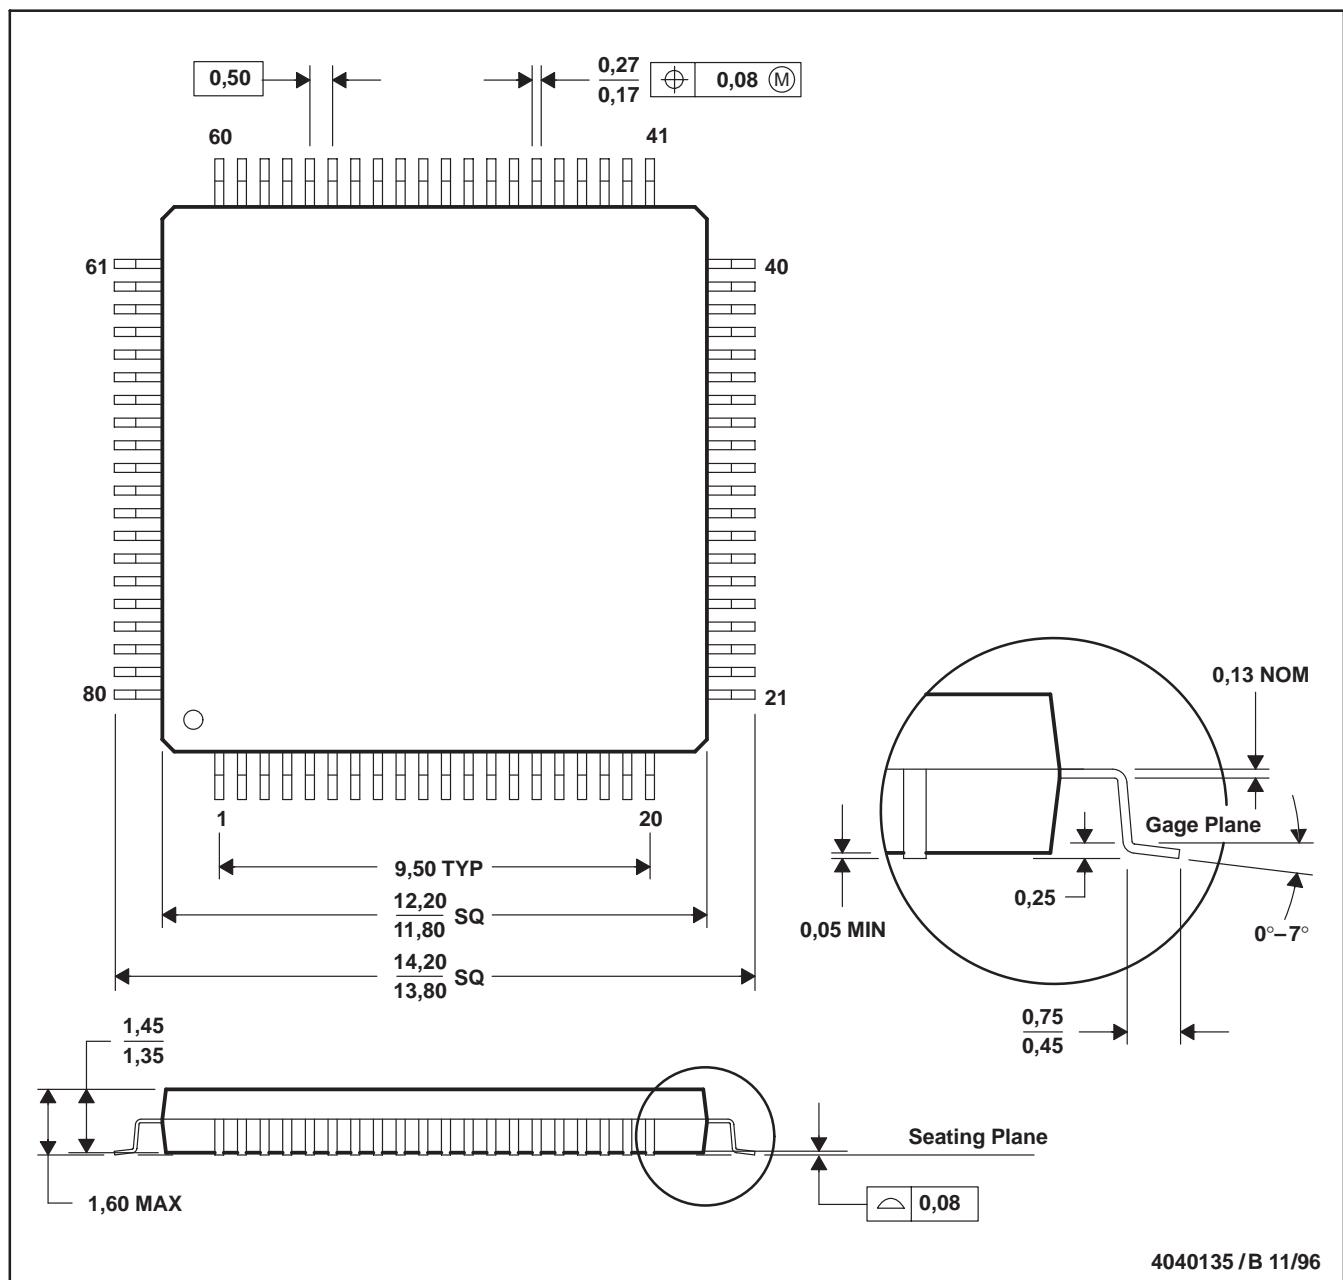

⁽³⁾ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
