OPTO-WIRELESS TRANSCEIVER MODULE HRM12001

HRM1200L is a one-piece wireless data transmission module which conforms to the IrDA standard (IrDA Ver1.2 Low Power Option).

With Stanley's Infrared LED, high sensitivity photodiode and newly developed driver IC, HRM1200L provides reliable wireless communication at a very low supply voltages.

HRM1200L's package size measures 2.2mm in height and 6.8mm in width with its metal shield case.

HRM1200L is designed to operate at low voltages from 2.7V to 3.6V.

HRM1200L is the best module for operating portable phones, PDA and portable equipment.

FEATURES

- ●Compatible with IrDA Ver1.2 Low Power Option.
- ●Ultra Compact Package: Height 2.2mm×Width 6.8mm×Depth2.8mm.
- ●Weight: 0.088g
- •With Metal Shield Case.
- ●LED current: 35mA (Vcc=3.3V, at 3.6mW/sr)
- ●Low Operating Current :120µA Max.
- ●Low Power Supply Voltage: 2.7~3.6V
- ●Complete Power Down Feature.

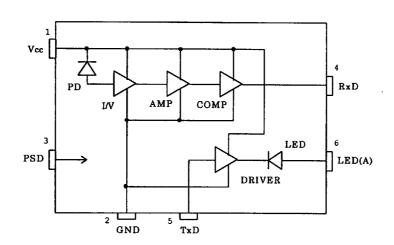

Standby Current Consumption: 0.2µA Max.

- The Circuit Prevents the LED from Emitting at DC current→LED(on):20µSec.TYP.
- Compatible with Reflow Soldering Process.
- •Incorporates Daylight Blocking Filter.
- •Quantity: 3,000pcs / reel.

MAPPLICATION

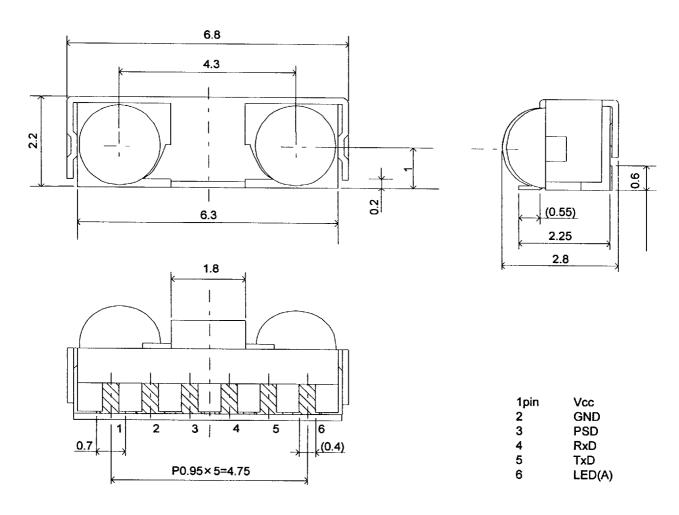

- ●Portable Phone
- ●PDA
- Other Portable Equipment

■CIRCUIT BLOCK DIAGRAM

MOUTER DIMENSIONS

Mechanical Tolerance: ±0.1

■PIN FUNCTION

PIN	SYMBOL	FUNCTION
1	Vcc	Power supply.
2	GND	GND for power supply.
3	PSD	This terminal switches to the low current consumption mode (standby mode). All the capabilities will be shutdown by changing the terminal to "H".
4	RxD	Receiving data output.
5	TxD	Transmission data input.
6	LED(A)	LED anode. It is connected to Vcc.

■ABSOLUTE MAXIMUM RATINGS

PARAMETER	SYMBOL	RATINGS	UNIT	REMARKS
Supply Voltage	Vcc	0~7	V	Vcc,GND
Input Voltage	Vin	GND-0.3~Vcc+0.3	V	TxD,PSD
Input Voltage	Vin	0~7	V	LED(A)
Output Voltage (External Voltage)	Vout	GND-0.3~Vcc+0.3	V	RxD
LED Current (Pulse)	Ipulse	50 ton ≤ 90μSec Duty Cycle ≤ 20%	mA	LED(A) Ta=25°C
Soldering Temperature	Tsol	260	°C	
Operating Temperature	Тор	-30~+85	° C	
Storage Temperature	Tst	-40~+100	℃	

^{*}Absolute maximum ratings are the conditions to avoid degradation in reliability.

ELECTRICAL CHARACTERISTICS

(Ta=25°C)

			_				(1a-23 C)
PARAMETER	SYMBOL	CONDITION	MIN	TYP	MAX	UNIT	REMARKS
Supply Voltage	Vcc		2.7		3.6	V	
High Level Input Voltage	ViH		Vcc -0.4			V	TxD,PSD
Low Level Input Voltage	VIL				0.4	V	
High Level Output Voltage	Vон	Іон=20µА	Vcc -0.3			V	RxD
Low Level Output Voltage	Vol	IOL=-400μA			0.3	V	
Receiving Current Consumption	Is	Vcc=3.3V		95	120	μА	PSD=0V, TxD=0V
Current Consumption In Standby Mode	ISTB				0.2	μА	PSD=Vcc, TxD=0V
RxD Output Rise Time	tRr			40	200	nSec	
RxD Output Fall Time	tRf			40	200	nSec	
RxD Pulse Width	tPWA	SIR=115.2Kbps	1	1.6	2.0	μSec	
Power Shut Down Time *1	TSD				1	μSec	
Start Up Time *2	TSTU				100	μSec	
Latency *3	TRRT				60	μSec	

^{*1:} I_{LED} is LED operating current which can be adjusted by the external current limiting resistor connected to LED(A) pin.

^{*2:} The time it takes for the module to revert to an active mode after the PSD data is in "L" from the standby mode.

^{*3 :} Switching time of the module status from transmission to receiving.

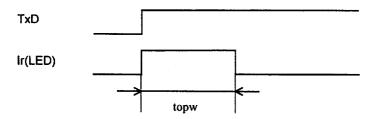

TOPTICAL CHARACTERISTICS

(Ta=25°C)

DANAMETER	avusa.	A CALIFORNIA I					(1a-25°C

- *1 : Early characteristics.
- *2 : Characteristics are subject to change depending upon noise influences.
- *3: The circuit prevents the LED from emitting at DC current. Note the following.

■ The Circuit Prevents the LED from Emitting at DC Current.

When TxD is kept "H", the circuit has a function which shuts down LED emission automatically.

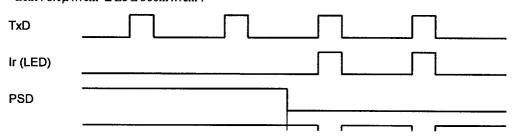

TRUTH TABLE

	Input	Output			
PSD	TxD	Ee	Ir(LED)	RxD	
Vil	Vih	х	High(On)	NV	
VIL	VIL	Ееін	Low(Off)	Low	
Vih	VIH	Х	Low(Off)	High	
VIH -	Vil	Х	Low(Off)	High	

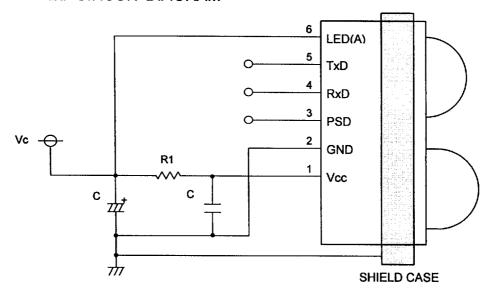

X : Don't care. NV : Not Valid.

Ee: Input irradiance present at detector surface.

EeIH: $8.1 \mu \text{W/cm}^2 \le \text{Ee} \le 500 \text{mW/cm}^2$.

■RECOMMENDED CIRCUIT DIAGRAM

Components	IrDA Ver1.2 Low Power Option (Ir=3.6mW/sr, ILED=35 mA, VCC=3.3V				
R1	10Ω,1/16W				
Cl	10μF				
C2	0.1μF				

OPlease choose a larger capacitor according to circumstances on Vcc line noise.

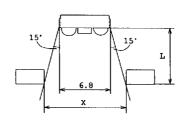

OPlease choose a capacitor which has good frequency characteristics.

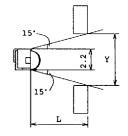

Recommended soldering Conditions

The formula for a minimum window size of Ir port is as follows:

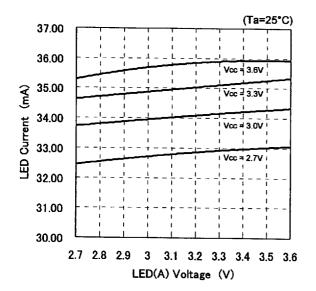

L: The distance from the top of housing surface to the top of module case surface(not top of lens).

Horizontal(width): X=6.8+L×0.54 [mm] Vertical(width): Y=2.2+L×0.54 [mm]

■fig.2 Supply Voltage - LED Current

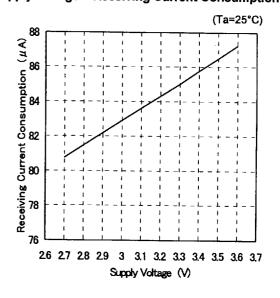

Notes: The graph from 1.4V to 2.7V is numerical value of reference.

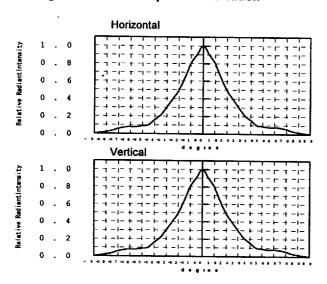

■fig. 3 LED Current - Radiant Intensity

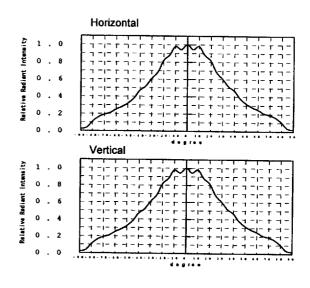

■fig.4 Supply Voltage – Receiving Current Consumption

■fig.5Transmission Spatial Distribution

■fig.6 Receiving Spatial Distribution

■RECOMMENDED SOLDERING CONDITIONS

OWith Soldering Iron

Temperature at tip:no more than 280°C

Time:3 sec.MAX.

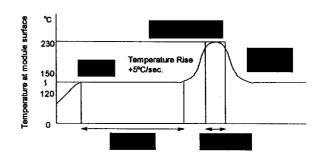

OReflow

Preheat:120 to 150°C,60 to 120 sec.

Soldering:230°C, within 10 sec.

Heating up and cooling down:5°C/sec.

Number of sldering:2 times MAX.

■ BAKING CONDITION

Please get rid of wet in case of the follows.

- (a) The indicator of dry tablet in the aluminum dry bag did not indicate blue.
- (b) It took 1 week after opening the aluminum dry bag.

Recommended baking condition:60±5°C, 10~20 hours

■NOTES

- •Information is updated up to July 1999.
 The products, specifications, characteristics and data listed in this brochure may be changed without notice as products are improved. Please confirm that you have the most recent specifications sheets when using.
- The technical information shown in this brochure demonstrate typical applications of referenced products. It does not constitute the warranting of industrial property nor the granting of any license.
- •When using the products in this brochure we ask that you strictly observe the maximum ratings, operating power supply and voltage range, heat dissipation characteristics, and other precautions for use. We are not responsible for any damage which may occur if these specifications are exceeded.
- •Products shown in this brochure have been manufactured for general use electronic applications such as office automation equipment, telecommunications equipment, audio/visual equipment, home appliances and instrumentation. They are not designed for applications where high reliability or safety is required, or where a failure may directly affect human lives or bodies, such as aerospace equipment, automobiles, medical equipment, nuclear control equipment, etc.
- No part of this brochure may be reprinted or reproduced without the prior written permission from Stanley Electric Co.,Ltd.
- •For further information about the products in this brochure or Stanley Electric products in general, please contact one of the offices below.

STANLEY OFFERS NEW IRDA-LOW-POWER MODULE

With a supported data rate of 2.4K-115.2K bps and an operating distance of 0-30 cm, the HRM 1200L expands Stanley Electric's IrDA-FIR product line with a transceiver module ideal for portable wireless communication devices.

The HRM 1200L shows Stanley's expertise in molding and opto-electronic technology, featuring a driver IC, highly sensitive photodiode, and infrared LED. One of the smallest in the industry, its operating current is only 80µA. Stanley's new HRM 1200L has an internal resister and pin-to-pin compatibility with HP IrDA module HSDL-32X1. Typical applications will include cellular phones, pagers, PDAs, and other portable communication devices.

IrDA-Low-Power Option Compatible Module (IrDA Ver 1.2)

Supported Data Rates: 2.4K-115.2K bps

Operating Distance: 0-30cm

	Parameter	Condition	MIN.	TYP.	MAX.	Unit	Dimensions
	Operating Voltage		(2.7)		3.6	V	
	Receiving Current Consumption	Vcc=3.3V		(80)	100	μА	
A B	Current Consumption in Standby Mode				(0.2)	μА	fig.1
	Transmission Radiant Intensity	(ILED=35mA)	4		28.8	mW/sr	J
	Light Pulse Rise/Fall Time				200	nSec.	
H2.2XW6.8	Operating Temperature		-30		+85	°C	
XD2.8mm	Mounting	Side View					

HRM 1200L Special Features

Ultra-compact: 2.2mm H x 6.8mm W x 2.8mm D

Low operating current: $80\mu A$ Low power supply: 2.7 to 3.6V

Complete power-down feature: standby current

consumption of (0.2)µA Max.

No DC current emitted by LED-LED (on): 20μ sec. TYP

Metal shield case

Daylight blocking filter

Compatible with reflow soldering process

Compatible with IrDA Ver. 1.2 low-power option

Pin-to-pin compatible with HP HSDL-32X1

THE HRM 1200L OFFERS NEW FEATURES AS HRM 150V IS DISCONTINUED

In a move to better accommodate the changing needs of manufacturers using LEDs and increase the efficiency of our IrDA product line, the HRM 150V has been discontinued.

We offer this data as primary information. Mass production is scheduled to begin in June 1999, at which time technical samples will be available. Stanley will continue to update you regarding the latest product specifications and training sessions.

PROFESSOR STANLEY WILL BE BACK NEXT MONTH.
