Dual JK flip-flop

HEF4027B flip-flops

DESCRIPTION

The HEF4027B is a dual JK flip-flop which is edge-triggered and features independent set direct (S_D), clear direct (C_D), clock (CP) inputs and outputs (O,$\overline{O}$). Data is accepted when CP is LOW, and transferred to the output on the positive-going edge of the clock. The active HIGH asynchronous clear-direct (C_D) and set-direct (S_D) are independent and override the J, K, and CP inputs. The outputs are buffered for best system performance. Schmitt-trigger action in the clock input makes the circuit highly tolerant to slower clock rise and fall times.
