## SN74LVC3G06 **TRIPLE INVERTER BUFFER/DRIVER** WITH OPEN-DRAIN OUTPUTS

SCES364G- AUGUST 2001 - REVISED AUGUST 2003

### description/ordering information (continued)

The output of the SN74LVC3G06 is open drain and can be connected to other open-drain outputs to implement active-low wired-OR or active-high wired-AND functions. The maximum sink current is 32 mA.

NanoStar™ and NanoFree™ package technology is a major breakthrough in IC packaging concepts, using the die as the package.

This device is fully specified for partial-power-down applications using Ioff. The Ioff circuitry disables the outputs, preventing damaging current backflow through the device when it is powered down.

<sup>†</sup> Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. The input negative-voltage and output voltage ratings may be exceeded if the input and output current ratings are observed.

2. The value of V<sub>CC</sub> is provided in the recommended operating conditions table.

3. The package thermal impedance is calculated in accordance with JESD 51-7.
